INTRODUCTION

1.1 VISION

A safer community that effectuate a pragmatic and holistic mechanism to prevent, mitigate and respond to any event of disaster and consistently advance in all aspects of disaster risk reduction.

1.2 MISSION

Develop and establish a structurally and functionally competent administrative unit at District and taluk levels, cognizant and adept in disaster management activities, which is prepared to minimize the devastating effects of a disaster, whether natural or human induced, and capable of appropriate timely deliverance of services upon an emergency.

1.3 POLICY

The Kerala State Disaster Management Policy, 2010 vide G.O (MS) No. 240/2010/DMD dated 19-06-2010 has laid down the guiding principles for the District disaster management plan. The policy aims to foster a culture of prevention, mitigation and preparedness from the grass root levels of the District administration.

1.4 OBJECTIVES OF THE PLAN

The primary objective of The District Disaster Management Plan (DDMP) is to be an instrument to implement the responsibilities assigned to DDMA in section 30(1) and (2) of DM act, 2005 and section 14 of KSDMA rules, 2007. In accordance with the guidelines in section 31(3) of DM act, the District Plan aims to include-

- a) *the areas in the district vulnerable to different forms of disasters;*
- b) *the measures to be taken prevention and mitigation of disaster, by the departments of the government at the district level and local authorities in the district;*
- c) *the capacity- building and preparedness measures required to be taken by the departments of the governments at the district level and the local authorities in the district to respond to any threatening disaster situation or disaster;*
- d) *the response plans and procedures, in the event of a disaster, providing for*
 - i. *allocation of responsibilities to the departments of the government at the district level and the local authorities in the district;*
 - ii. *Prompt response to disaster and relief thereof;*
 - iii. *Procurement of essential resources*
 - iv. *Establishment of communication links; and*
 - v. *The dissemination of information to the public;*

1.5 SCOPE OF THE PLAN

District disaster management plan abides by and integrates the directions of National DM Act 2005, the State DM Act 2007, the State DM Policy 2010, rules, regulations and other significant guidelines.

- The plan provides a necessary framework for the District administration to facilitate, coordinate and monitor disaster management tasks by mobilizing the resources and taking the expertise of relevant Governmental departments at central and state level, local self-governments, private sector, non-governmental organizations and community in every phase of disaster management.
- This plan is consistently operational at all levels of management within the geographical and jurisdictional limits of the District administration.
- This plan is pertinent to the prevention of hazards, mitigation, preparedness, response and recovery from disasters listed in section 7 of State DM Policy 2010 and other events recognized as hazards or disasters by the State Executive Committee or the State Disaster Management Authority from time to time.

1.6 AUTHORITY & REFERENCE

The DDMA has the authority to conceive, test and implement a District Disaster Management Plan in accordance with the section 30 (2) i, ii & iii of the DM act 2005. The acts, rules, policy for disaster risk reduction in the District and regulations relating to the implementation of this plan are as given below:

14.	The Petroleum Act, 1934
15.	Indian Standard Code of Practice for Protection of buildings and allied structures against lightning

1.7 PLAN DEVELOPMENT

As per section 30 (2) (i) of the National DM Act and state DM policy,2010, the District shall prepare a Disaster Management Plan including District Response Plan for the District with respect to the guidelines issued by the National and State Authority respectively. The District administration shall coordinate and monitor the implementation of the National Policy, State Policy, National Plan, State Plan and District Plan.

The State Executive Committee of KSDMA in its meeting held on 14th June 2013 has authorized State Emergency Operation Centre, formerly HVRA Cell (Research & Technical Laboratory of KSDMA) to revise the District DM Plans within 2 years starting January 2014. . Besides SEOC prepared a template and the Principal Secretary, Revenue and Disaster Management has circulated the template to the nodal departments for the formulation of departmental plans.

1.8 PLAN REVIEW & UPDATING

DDMP consists of two major components- a dynamic component and a stable component. The stable component encompasses the guidelines laid down by the national, state acts, rules and shall be revised once in 5 years by SDMA whereas, the dynamic component comprises of elements that are subject to constant change and thus should be revised once in a year in the meeting convened by DDMA. Although, DDMA has the authority to decide on the regularity of review and revision of DDMP, plan review should mandatorily be conducted in the aftermath of any declared disaster within the District or neighbouring Districts and modifications should be made accordingly. The DDMP may be reviewed preferably in February and updated in April update of the plan should be based on inputs gained under:

- a) Mock drills
- b) Recommendations from all Departments in DDMA meeting
- c) Past disaster experiences
- d) Directions issued from State Disaster Management Authority

HAZARD, VULNERABILITY AND RISK ASSESSMENT

2.1 DISTRICT PROFILE

Kannur district derived its name from the location of its headquarters at Kannur town. The old name 'Cannanore' is the anglicized form of the Malayalam word Kannur. The district can be divided into three geographical regions - highlands, midlands and lowlands. The highland region comprises mainly of mountains. The midland region, lying between the mountains and the low lands, is made up of undulating hills and valleys. The lowland is comparatively narrow and comprises of rivers, deltas and seashore.

TABLE 2: DISTRICT PROFILE AT A GLANCE

Head quarters	Kannur
Location (of the Headquarters)	North Latitudes - 11° 40' to 12° 48' East Longitudes- 74° 52' to 76° 56'
Total area(district)	2966 Sq.Km.

Barren & uncultivable land	1570 Ha

Details of major rivers in Annexure 1

2.2 CLIMATE AND VEGETATION

The district has a humid climate with an oppressive hot season from March to the end of May. This is followed by the South-West monsoon which, continues till the end of September. October and November form the post-monsoon or retreating monsoon season. The North East monsoon which follows extends up to the end of February, although the rain generally ceases after December. During the months of April and May, the mean daily maximum temperature is about 35° Celsius. The annual average rainfall is 3438 mm and more than 80 percent of it occurs during the period of South –West monsoon. The rainfall during July is very heavy and the district receives 68 per cent of the annual rainfall during this season.

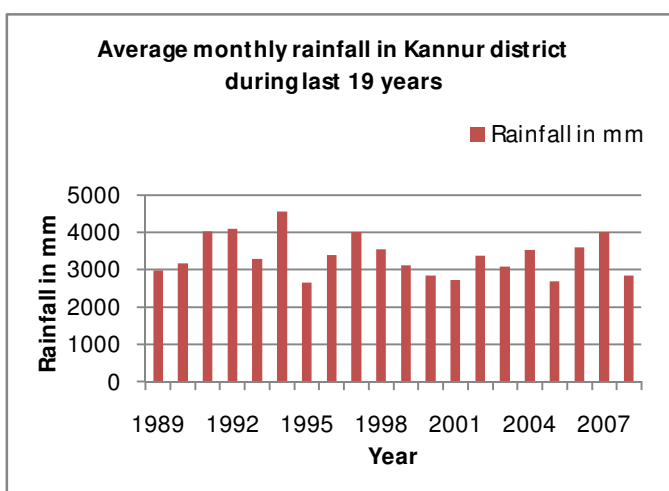

FIGURE 1: AVERAGE MONTHLY RAINFALL IN KANNUR DISTRICT

Kannur district is very rich in vegetation. Natural vegetation, except in some coastal regions, consists of different types of forests. But, in spite of generally favorable climatic conditions, vegetation is not, uniform. In restricted regions, with their own micro climate or special, edaphic features, plant formations assume different characters. Thus, plant communities, ranging from psammophytes and mangroves to evergreen forests are seen in the district. The coastal region is a comparatively narrow zone, characterized by secondary soil which is rather loose and sandy. The sterile sandy tract supports only a poor vegetation of the psammophyte type. Plants are few and mostly prostrate. Erect species are small and short. Owing to very poor water holding capacity of the soil, these plants are provided with special xerophytes adaptations.

TABLE 5: WEATHER AND CLIMATE

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

2.3 AGRICULTURE AND LAND USE PATTERN

The main crops grown in the district are paddy, coconut, pepper, cashew, tapioca, areca nut and plantation crops like rubber; paddy occupies the largest area among annual crops. The average yield of paddy is recorded as 1.74 tons per hectare. Next to paddy the most important crop is coconut. Coconut is extensively grown throughout the district. An important cash crop grown in the district is cashew nut. The district plays a major role in its cultivation and production.

Among spices pepper occupies an important place in agriculture. Pepper is mostly grown as an intercrop with coconut areca nut and various trees. Rubber is the most important industrial cash crop among the plantation crops.

2.1 HAZARD PROFILE OF THE DISTRICT

Disaster subcategory definitions:

- 1. Naturally Triggered/Weather related:** Events caused by short-lived/small to meso-scale atmospheric processes (in the spectrum from minutes to days)
- 2. Geological:** Events originating from solid earth
- 3. Biological:** Disaster caused by the exposure of living organisms to germs and toxic substances
- 4. Anthropogenically/Technologically triggered:** Disaster triggered by human intervention

TABLE 13: HAZARD PROFILE OF THE DISTRICT

Sl.No.	Classification	Types of Disaster
1.	Naturally Triggered/ Weather Related	Flood
		Tsunami
		Coastal erosion
		Kallakadal
		Storm surge
		Thunder and lightning
2.	Geological	Cyclone
		Drought
3.	Biological	Earthquakes
		Landslides
4.	Anthropogenically/ Technologically triggered	Epidemics
		Cattle epidemics
		Food poisoning
		Pest attack
4.	Anthropogenically/ Technologically triggered	Industrial explosions
		Petro-chemical transportation accidents
		Fireworks accidents
		Road accidents
		Human triggered forest fire
		Stampede
		Short circuit and related fire
		Building collapse
		Boat capsizing
		Tourism related drowning
4.	Anthropogenically/ Technologically triggered	Air and rail accidents
		Hooch accident

2.2 THE RISK OF EACH HAZARD OVER THE DISTRICT

Hazards can originate indifferent sources and systems, suchas at mospheric, hydrologic, oceanographic, volcanologic, seismic, neotectonic, the environmental impacts are equally catastrophic. Globally, losses from natural hazardsarealso increasing, mostly due to the rapid increase in human population. This unprecedented number of people has reduced resource availability and forced people to live in marginal areas where natural hazards occur more frequently and often with greater severity.

Kannur district is a multi-hazard prone district where floods, cyclones, earthquake, coastal erosion, etccanoccur. Every yearthe district bearshuge loss from natural and manmade disasters. It causes widespread damage to life and property. The unique geo-climaticand social condition of the district, makethe place more vulnerableto disasters. The coastal community faces constant threat of seaerosion; the communities livingin the midland are vulnerable to flood and lightning; the hill communities are prone to land slipping and slides. The district mainly suffers from natural disasters such as flood, drought, sea erosion, landslides, lightning and manmade disasters such as road accidents, fire accidents, bomb blasts, drowning, etc.

TABLE 14: LIST OF DAMAGES DUE TO NATURAL HAZARDS IN KANNUR DISTRICT DURING LAST 11 YEARS.

Year	Human live lost	Agriculture crop loss (in Rs lakhs)	No. of houses damaged		Estimated value of damages to houses damaged (in Rs. Lakhs)		Estimated value of total damages
			Fully	Partially	Fully	Partially	
2002	6	114	96	2349	53.96	347.2	515.16

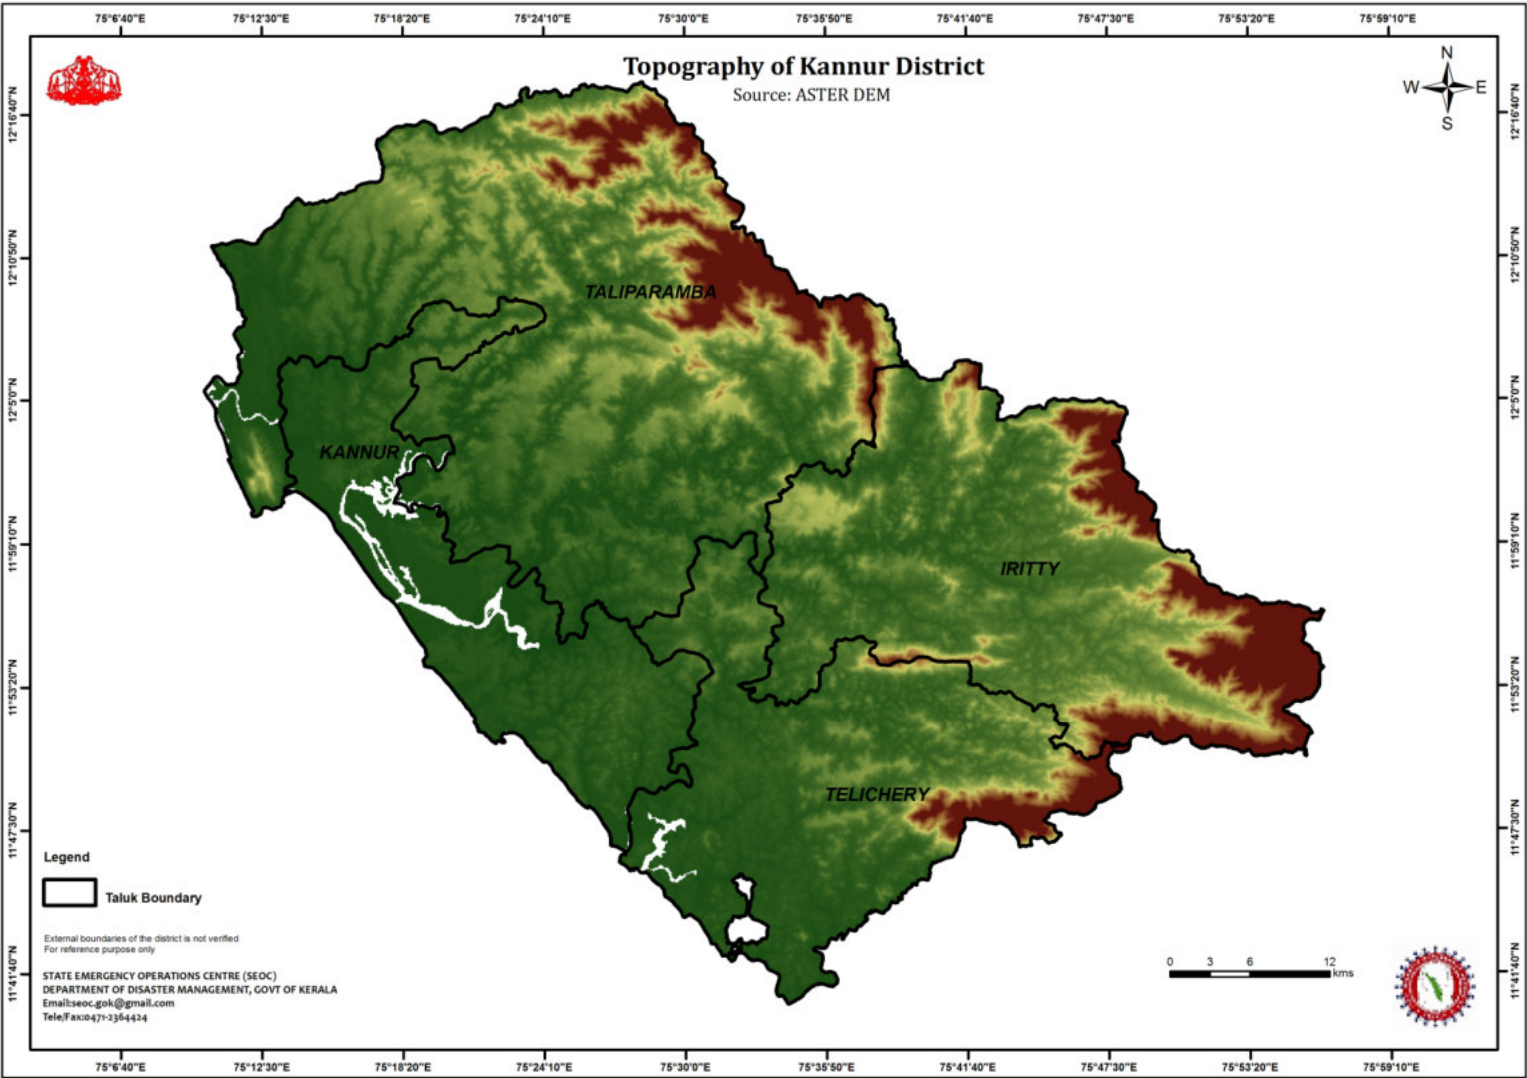

FIGURE 5: TOPOGRAPHY MAP OF KANNUR DISTRICT

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

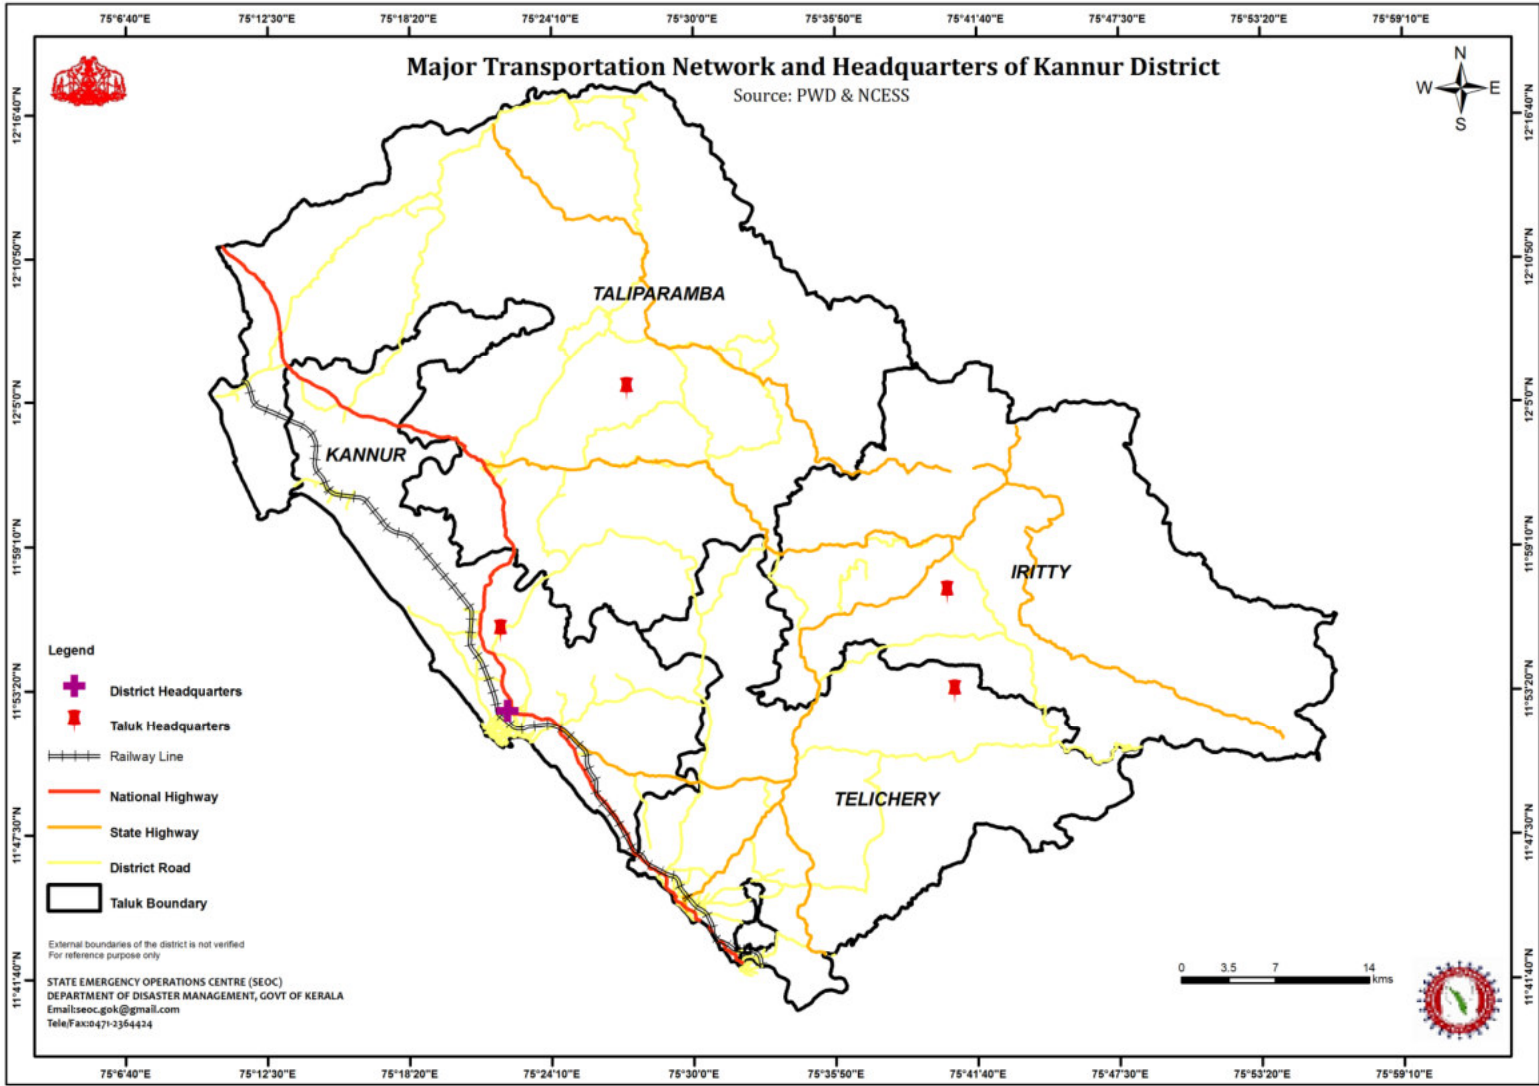

FIGURE 6: TRANSPORTATION NETWORK MAP OF KANNUR DISTRICT

2.2.1 FLOOD

The district is prone mostly to the river flood and the coastal flood. The reason for local floods found in the low lying areas of coastal region, especially in the northern part of the district, is poor drainage condition mainly due to the geography of the region. Some parts of the sea areas are below sea level and the flooded water from the rain and surge stayed there. Soil erosion and silting of river beds add to the reason. There is no effective flood forecasting system evolved so far but to be understood by incessant rains.

FIGURE 7: FLOOD IN KANNUR DISTRICT DURING THE LAST MONSOON (2013)

2.2.2 CYCLONE

The Kannur district is entirely cyclone prone and a wind speed of 39m/s can hit the district. During last year's, formation of low pressure in the Arabian Sea, cause heavy rain and thereby resulting severe damages to district. Some times with the unpredictable disturbances in the sea, boats and country crafts get capsized, trapped in to high tide and even get fully destroyed. Severe wind cause heavy dangers to the upland crops during the on set of South-West Monsoon. Heavy rain and land slides accompanied with the low pressure system caused severe damages to the agriculture and infrastructure in the district.

2.2.3 DROUGHT

Drought occurs due to the level of the ground water is low and the water content in the soil is less. During last several years many parts of the district, especially high lands faced serious problems of drought. Several hectares of agricultural land become dry and agricultural crops are lost due to drought. People are forced to walk long distance for fetching drinking water. Water scarcity intensifies during March to end of May, every year.

2.2.4 THUNDER AND LIGHTNING

Thunder and Lightning are common phenomena in the district both during Monsoons and November rains called “Thulavarsha”. Most of the casualties reported due to lightning and thunder are in Pre-Monsoon season and at the time of thulavarsha. Losses to Human lives, livestock, houses and buildings and crops like coconut, Areca nut and Rubber are also being reported extensively.

2.2.5 COASTAL EROSION

The district faces worst from sea erosion at the time of monsoon. In Kerala, Kannur district has the longest length of coastal area. The area where seawall is no longer made; the rate of erosion is very high. Coastal villages in the south and north end of the district face high rate of erosion.

FIGURE 8: DAMAGED SEAWALL DUE TO COASTAL EROSION IN KANNUR DISTRICT

2.2.6 LANDSLIDE AND MUDFLOWS

Landslide is a common phenomenon in the highland regions of the district especially during Monsoon season. More than 5 major landslides were reported in recent years. Heavy casualties to human beings, properties e.g. roads, buildings and agricultural land crops have also been reported in recent years.

2.2.7 EARTHQUAKE

Kannur district did not experience the threat of large scale earthquake. But minor tremors have been experienced in several parts of this district especially in high ranges recently. If such major disaster occurs, severe damages are likely to be caused to the structure of buildings and houses. A minor shock of 1.3 in Richter scales was experienced in August 2006 in some parts of Alakode Panchayath.

2.2.8 TSUNAMI

Tsunamis are most commonly generated by earthquakes in marine and coastal regions. Major tsunamis are produced by large shallow focus earthquakes associated with the movement of oceanic and continental plates. Underwater landslides associated with smaller earthquakes are also capable of generating destructive tsunamis. Other large-scale disturbances of the sea-surface that can generate tsunamis are explosive volcanoes and asteroid impacts. In 2004 tsunami the coastal villages in the Kannur district get affected and a person was killed. Severe damages were occurred to the sea wall.

2.2.9 DAM FAILURE/ DAM BURSTS

The main dam in the District is Pazhassi dam and dam across the Kattampally River. Pazhassi dam consists of Valapattanam River at Kulloor, Veliyambra about 38 Km from Kannur and Thalassery. Pazhassi reservoir has an area of 650 Ha and extend upto Vallithodu about 12 Km North East of the dam. The length of the dam is 245 m with a spillway of 138 m. Spillway consists of 16 radial shutters of size 6.10 x 5.18m. The shutters are designed for a maximum flood discharge of 3500 cumecs. Probable maximum flood discharge calculated is 4248 cusecs. The full reservoir level at Head Works is 26.52m. The road level over barrage is 28.35m. The maximum flood level at Head works is 22.70m.

During Monsoon season the level of water in the dam reached beyond its capacity and the authorities are forced to open the shutters of the dam. It causes floods in the lower regions of the dam. Early warning is given to the local people while opening the shutters. During last monsoon, because of the failure in the shutters, the authorities can't open the shutters and this cause flood in the upper regions of the dam especially in Iritty region. Both the urban and rural areas were flooded and huge losses to the properties were occurred. In case of a disaster, which may be in the form of heavy floods or earthquake, there is a possibility of dam collapse.

2.2.10 EPIDEMICS

Incidence of Epidemics like viral fever, leptospirosis, hepatitis, Chikungunya, Dengue fever, cholera, filariasis, typhoid etc has become common in the district. Coastal, urban and hilly areas are more prone to epidemics. Some tribal colonies in high ranges and also fisherman colonies usually suffer from such epidemics during monsoon season.

2.2.11 PEST ATTACKS

Most of the people in the district depend on agriculture for their livelihood. Major crops are paddy, arecanut, coconut, pepper, cashew and plantain crops like rubber. Diseases such as

Brown leaf spots, Blast, Stack burn, etc. very common in paddy fields. Bunchytop, leafspots in banana, Budrot, leafrot. Stem bleeding in coconut, abnormal leaf fall, Pink disease in rubber are very common in the district.

2.2.12 CHEMICAL AND INDUSTRIAL DISASTERS

In Kannur district chemical industries are rare but there are a lot of small scale industries and Petrol storage, distribution and LPG bottling centres. These as near to these centres are prone to disasters. As the NH-17 passes through the district, accidents may occur at the time of transportation of Petroleum products and other toxic substances. Large containers of petroleum products like benzene and chemicals such as ammonia might lead to explosion while transportation or evacuation.

2.2.13 ROAD ACCIDENTS

Most of the accidents have occurred in National and State high ways. The accident prone areas in the district are Edat, Kuttikkal, Amukkampalli, Hussanmotta, near Dharma dam Police Station, near Nirmalagiri College, Edathotty, Keezharkunnu, Punnad, Mayiladumpara, Kappachery turning, Nagavalavu, near Uliyil bridge, Peruvalathuparamba, Mattannur, Karadivalavu, Peruman, Palchuram, Caltex & Thana junctions, Thazhechovva Bypass Road, AKG Hospital to Pallikkunnu, Melechovva to Kannothumbal, Highway Junction to toll-booth Valapattanam, Keecheri, mangad, Muzhappilangad, etc. Last year in Irikkur, 9 school children were killed in a road accident.

TABLE 15: DETAILS OF ROAD ACCIDENTS IN KANNUR DISTRICT FOR THE LAST 12 YEARS

Year	No. of accidents	No. of persons killed	No. of persons injured
2002	1602	143	2476
2003	1545	134	2478
2004	1530	144	2319
2005	1642	123	2895
2006	1699	139	2517
2007	1726	189	2562
2008	1812	147	2467
2009	1691	197	2202
2010	1671	200	2382
2011	1642	173	2401
2012	1862	218	2536
2013	1867	193	2454

2.2.14 BOAT CAPSIZING

Ferry service is very common in the district and thereby chances of drowning are very high. Cases of man missing due to boat capsizing are regular features in the district during monsoon season. Due to bad weather, the fishermen who go for fishing are unable to reach the sea shore. Several accidents have taken place in the district and many human lives have been thereby lost.

2.2.15 SERIAL BOMB BLASTS

Bomb blast may happen at any time in any place at present. If such incidents happen, loss to human life and properties is likely to occur. Moreover, the past history of political clashes in the district has been rise to the danger of the bomb production and its usages.

2.2.16 AIR ACCIDENTS

As the district is situated in between the Mangalore, Bangalore and Calicut airports and a new port is coming in the district itself, the chance of air crashes is very high.

TABLE 16: DISASTER HISTORY OF KANNUR DISTRICT FOR THE LAST 14 YEARS

	State level projects	Irrigation Projects	

INSTITUTIONAL ARRANGEMENTS

3.1 INTRODUCTION

Most of the disasters are to be managed at the state and district level. The centre plays a supporting role in providing resources and assistance. It will mobilize support in terms of various emergency teams, support personals, specialized equipment and operating facilities depending upon the scale of the disaster. Active assistance would be provided only after the declaration of national emergency level. (National Disaster Response Plan, 2001)

In case disaster may be managed at the district level, district emergency operation system would be activated where state and central level authorities would be on guard in case of assistance needed. Incident Commander (IC) of the district would activate the Emergency Support Functions and Incident Command System and similarly, according to the guidance disaster management teams and quick response teams would be responding. If disaster may not be managed with district level and required active participation of state resources, State EOC would activate and would take over the IC system.

3.2 DISTRICT DISASTER MANAGEMENT AUTHORITY – KANNUR

District Disaster Management Authority, (Kannur) is an institution constituted as per the National Disaster Management Act, 2005 at the District level to ensure effective management and response to any disaster.

District Disaster Management Committee is the high-powered committee at District level to look after disaster management and emergency response. As per the G.O. (P) No.303/08/DMD dated 09.09.08, the District Disaster Management Authority was established in Kannur district chaired by the District Collector. The District Panchayath President is the Vice-Chairperson and the Additional District Magistrate is the Co-Chairperson. The Superintendent of Police, the District Medical Officer (Health), Assistant Divisional Officer of Fire and rescue Services and the Principal Agricultural Officers, are the Ex officio Members, nominated under clause (f) of sub-rule (2) of rule 14.

The DDMA (Kannur) has following structure:

TABLE 23: DDMA STRUCTURE

SI No	Organization & Designation	Designation in DDMA
1	The District Collector	Chairman
2	The President, District Panchayath	Co-Chairperson
3	The Additional District Magistrate (CEO)	Member
4	The District Police Chief	Member
5	The District Medical Officer of Health	Member
6	The Assistant Divisional Officer, Fire and Rescue	Member
7	The Principal Agricultural Officer	Member

List of Contact Numbers in Annexure 28

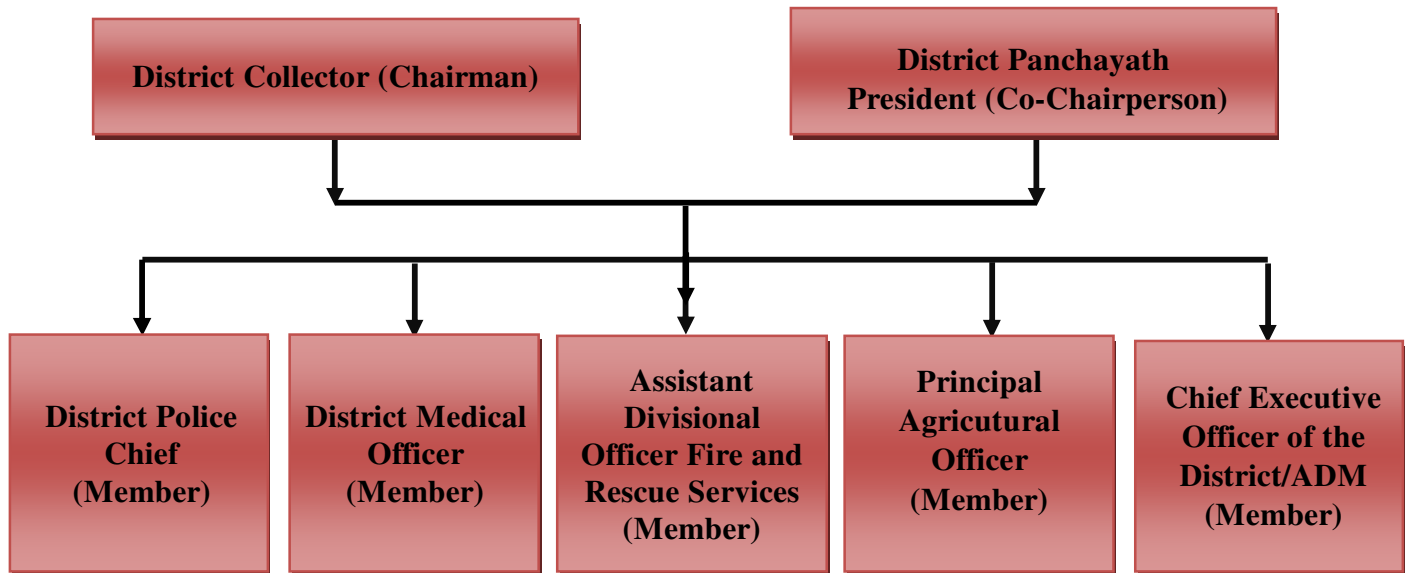

FIGURE 10: FLOW CHART OF THE STRUCTURE OF DDMA

3.2.2 DISTRICT CRISIS MANAGEMENT GROUP

This is the core group to take decisions in emergency situations. This core group convenes meetings when there is an emergency situation in the district. The core group is confidential in nature. In the case of disasters it has to meet frequently with the following functions:

- To take stock of the situation
- Assist the incident commander to take appropriate decision in managing the disaster
- Deciding the way of immediate operation in disaster relief and rehabilitation works
- Any other as per the need of the time

3.2.3 EMERGENCY OPERATION CENTRE

EOC is the nodal point for the overall coordination and control of the relief work in case of any disaster situation. In case of any disaster district level EOC have to be activated. The primary function of EOC is to facilitate smooth inflow and outflow of disaster relief activities. The EOC acts as a bridge between the state and central governments.

Kannur district shall have an exclusive Emergency Operation Centre (EOC) at District Head Quarter. This shall be round the clock set up with sufficient man power and most modern equipments. This centre is intended to coordinate all disaster related activities in the district starting from preparedness to rehabilitation and reconstruction. There shall be dedicated telephonenumber and other communication facilities.

3.2.3.1 ROLE OF EMERGENCY OPERATION CENTRE IN NORMAL TIME

The Additional District Magistrate is the Officer-in-charge of EOC. He will be responsible for the effective functioning of the EOC. Responsibilities of the EOC in charge in normal time include:

- Ensure that all equipments in the EOC are in working condition;
- Collection data on routine basis from line departments for disaster management
- Develop status reports of preparedness and mitigation activities in the district;
- Ensure appropriate implementation of District Disaster Management Plan
- Maintenance of data bank with regular updating
- Activate the trigger mechanism on receipt of disaster warning/occurrence of disaster

3.2.3.2 ROLE OF EMERGENCY OPERATION CENTRE DURING DISASTER

On the basis of the message received from the forecasting agencies, warning has to be issued for the general public and the departments, which play a vital role during emergencies. Issuing correct and timely warning would be one of the prime responsibilities of EOC. For effective dissemination of warning EOC should have a well-planned line of communication. The DC shall be the competent authority to disseminate a disaster warning. The warning on occurrence of a disaster will also be communicated to:

- All the concerned departments
- Members of DDMC
- Hospitals in the disaster area
- Emergency Operation Centre in the neighbouring districts
- State Emergency Operation Centre
- People's representatives from the district

Apart from this the District Emergency Operation Centre the onsite EOCs are to be set up with the help of the district EOC. Constant communication between the State EOC, District EOC and Onsite EOC is mandatory for updates on the disaster, which happened

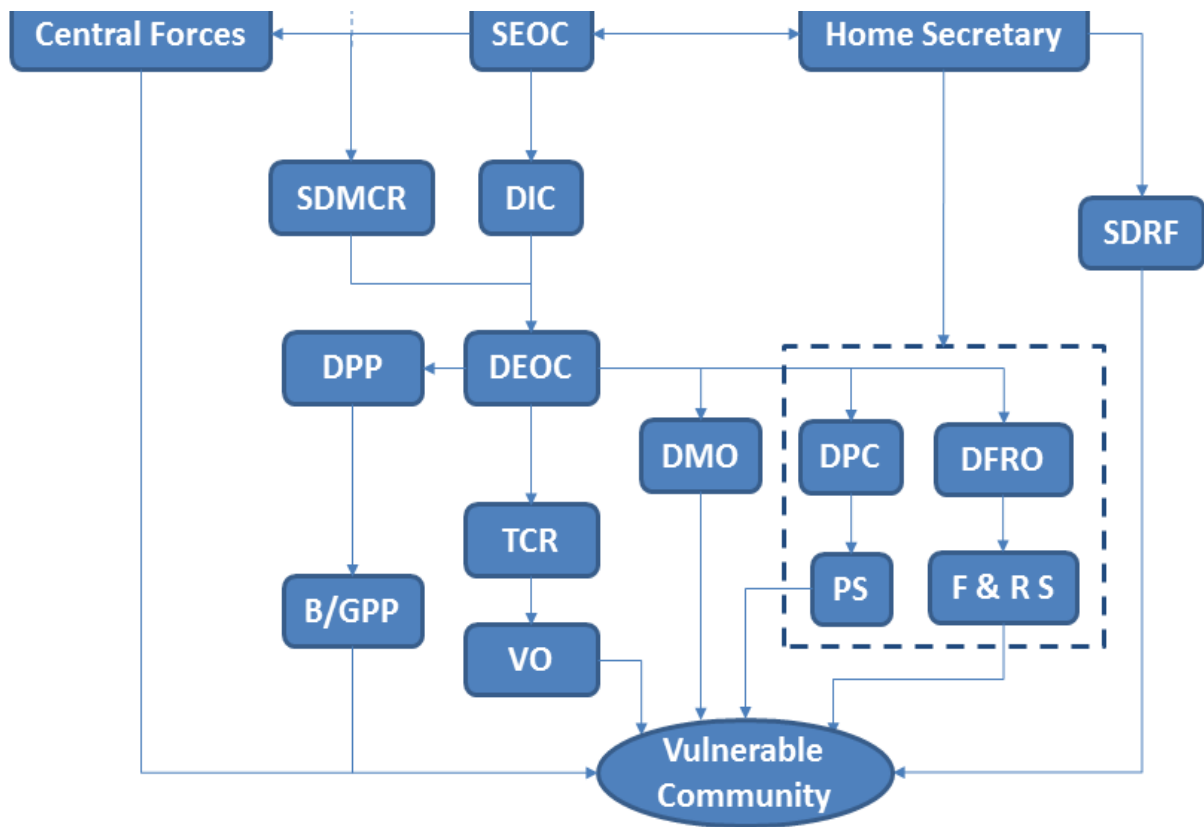

3.3 EMERGENCY INTER COMMUNICATION BETWEEN DIFFERENT STAKEHOLDERS

It is seen that the relevant departments start constituting teams/ mobilizing resources only after the crisis/ disaster has struck, leading to delays. The relevant departments/ agencies should draw up Emergency Support Function Plans and constitute response teams and designate resources in advance so that the response is not delayed. Pre contract/ agreement can be made for all disaster relief items so as to avoid delays in procuring relief items after disaster situation.

The interdependence of facilities and their management creates a difficult situation for disaster managers during a disaster. Therefore, a crisis situation demands the attention and assistance of experts from different fields and sectors in order to ensure a quick and effective recovery. However, if the assistance provided is not predefined and coordinated it can lead to slow progress and relief work gets adversely affected. Keeping this aspect of disaster management in view, fourteen Emergency Support Functions have been conceptualized to take care of various response and infrastructure facilities, imperative for immediate as well as long term response to disasters.

Emergency Support Functions are the essentials of Emergency Management comprising of various coordinating agencies, which manage and coordinate specific kinds of assistance common to all disasters types. Each ESF is headed by a lead organisation/ ministry responsible for coordinating the delivery of goods and services to the disaster area, and is supported by numerous other organisations. These ESFs form an integral part of the Emergency Operation Centres (EOC) and each ESF should coordinate its activities from the allocated EOC. Extension teams and workers of each ESF will be required to coordinate response procedures at the affected site.

The designated primary agency, acting as the Central agency will be assisted by one or more support agencies (secondary agencies) and will be responsible for managing the activities of the ESF (Emergency Support Functions) and assisting the State in the rescue and relief activities and ensuring that the mission is accomplished. The primary and secondary agencies have the authority to execute response operations to directly support the State needs.

SIC: State Incident Commander; DIC: District Incident Commander; SDMCR: State Disaster Management Control Room; DPP: District Panchayat President; TCR: Taluk Control Room; VO: Village Officer; B/GPP: Block/Gram Panchayat President; DPC: District Police Chief; DFRO: District Fire & Rescue Officer; PS: Police Station; F & RS: Fire & Rescue Station; Central Forces: CAPF, CRPF, BSF& RPF

FIGURE 11: FLOW CHART ON EMERGENCY INTERCOMMUNICATION BETWEEN STAKE HOLDERS

At the district level, the Revenue Department of the district is the prime coordinating agency for disaster risk management efforts. However there will be other agencies involved in-charge of different ESFs. Each ESF is headed by a lead organization and assisted by supporting organizations for coordinating the delivering resources and services to the disaster-affected area. These ESFs forms an integral part of the EOC and each ESF should coordinate its activities form the allocated EOC. Extension teams and quick response team (QRTs) would be required to follow their response procedures at the affected site. Nodal officers of all the ESFs would constitute the Incident Management Team. Nodal officer would also nominate names for the QRT members who will accomplish disaster management related work at the field level (Figure 3.2). Similarly supporting agencies would also nominate their nodal officers and QRT members who will assist to the primary officers during response phase. Additional names should also be proposed to backstop the requisite positions.

3.4 INCIDENT COMMAND SYSTEM

3.4.1 Introduction

The Incident Command System is a recent inception in the disaster administrative mechanism of the country. This is a tested institutional mechanism with clear objective of coordinating all manpower and other resources. In an administrative circle where a large number of line departments with unique features exist, a mechanism like incident command system is much useful.

In this chain of system, the District Magistrate is the commanding officer in case of emergency, pertaining to his own district. If the disaster is in more than one district, the DC of the district that has the maximum loss will act as the incident commander. In case all the districts are more or less equally affected, the DC will act as incident command in his/ her district under a Unified Incident Commander. It is mandatory that all line departments/ organizations/ individuals should obey the command of the incident commander as condition demands. He can divert all mechanisms and resources in the district to fight against a scenario leading to disaster/ calamity in the district.

3.4.2 Need for Incident Command System

In our federal system of governance, in the aftermath of a disaster, the primary responsibility for undertaking the rescue, relief and rehabilitation measures rests with the concerned State Governments. The role of the Central Government is supportive, in terms of physical and financial resources and complementary in sectors such as transport, early warning systems, etc.

India has a well-defined administrative structure extending up to the village level. In the States, usually the Department of Relief and Rehabilitation is the nodal department for disaster management. The Chief Secretary, as the head of the State administrative machinery, coordinates and supervises the functioning of all departments. At the District level, the Collector/District Magistrate is the administrative head who coordinates the activities of the district-level departments. The Districts are divided into subdivisions, each of which is under the administrative control of a Sub-divisional Officer. The sub-divisions are further divided into Blocks and Taluks under the administrative control of the Block Development Officers/Tahsildars who coordinate the functioning of the various departments in their respective jurisdiction. The Relief Commissioner at the State level and the Collector/District Magistrate at the District level are responsible for disaster management. Similarly, the Sub- Divisional Officer and the Tahsildar are responsible for disaster management at their respective levels.

The advantage of the existing system is that there are well-defined and clearly designated coordinating authorities at all levels. This facilitates the deployment of resources available with different offices/departments of the Government for responding to an emergency/disaster.

A major weakness in managing response has been that the designated coordinating officers at various levels are not backed by a professional team whose different members are trained for performing specialized functions. Emergency response requires the performance of a variety of roles, viz. material/logistics management; management of search and rescue operations; management of personnel; communications, etc. The related issues/questions and managerial tasks ultimately devolve upon the coordinating officer who is required to take decisions on all aspects, like drawing up plans; logistics management; personnel and media; quartering supplies; transport, etc. As a result of the manifold imperatives, the officer may get overwhelmed. The deployment of supporting staff may also not be optimal. For example, when large quantities of relief supplies arrive, the officer designated to handle the related logistics has not been earlier equipped through any professional training in supply management.

The experience during past disasters is that major inefficiencies in the mobilization and deployment of resources have occurred. Disaster management operations often take place without any appropriate plan. The coordinating officer-in-charge is tied down with the nitty-gritty of managing every aspect and this distracts the concerned officer from the overall task of disaster management. This officer has, in addition, to liaise with the higher levels of Government, different voluntary organizations and manage the logistical support received from other agencies. Professional incident management which is a specialized function requires that a well-trained team be in position with the different team members trained in planning, operations, logistics, personnel, administration, communications, etc. In the event of a disaster, in our present system, different officers are assigned these specialized roles without having been professionally trained to fulfill them. A professional incident management system would undoubtedly greatly enhance the quality of our emergency response.

Based upon these considerations, it is proposed by MHA to professionalize the emergency/disaster response management system in the country by the adoption of the Incident Command System modelled along the lines of the Incident Command System presently being used in the United States. The system was discussed in the meeting of the Relief Commissioners and has been modified to suit Indian conditions.

3.4.3 Incident Command System Organization

The Incident Command System (ICS) is an on-scene, all-risk, flexible modular system adaptable to any scale of natural as well as man-made emergency/incidents. The ICS seeks to strengthen the existing disaster response management system by ensuring that the designated

controlling/responsible authorities at different levels are backed by trained Incident Command Teams (ICTs), whose members have been trained in the different facets of emergency/disaster response management. The ICS will not put in place any new hierarchy or supplant the existing system, but will only reinforce it. The members of the ICT will be jointly trained for deployment as a team. When an ICT is deployed for an incident, all concerned agencies of the Government will respond as per the assessment of the Team. This system therefore enables proper coordination amongst the different agencies of the Government. The five Command functions in the Incident Command System are as follows:

- i. **Incident Command** – Has overall responsibility at the incident. Determines objectives and establishes priorities based on the nature of the incident, available resources and agency policy.
- ii. **Operations** – Develops tactical organization and directs all resources to carry out the Incident Action Plan.
- iii. **Planning** – Develops the Incident Action Plan to accomplish the objectives. Collects and evaluates information, and maintains status of assigned resources.
- iv. **Logistics** – Provides resources and all other services needed to support the organization.
- v. **Finance/Administration** – Monitors costs related to the incident, provides accounting, procurement, time recording, cost analysis, and overall fiscal guidance.

The ICS will comprise of two broad components (Figure 3.3), viz. Incident Response and System Institutionalization.

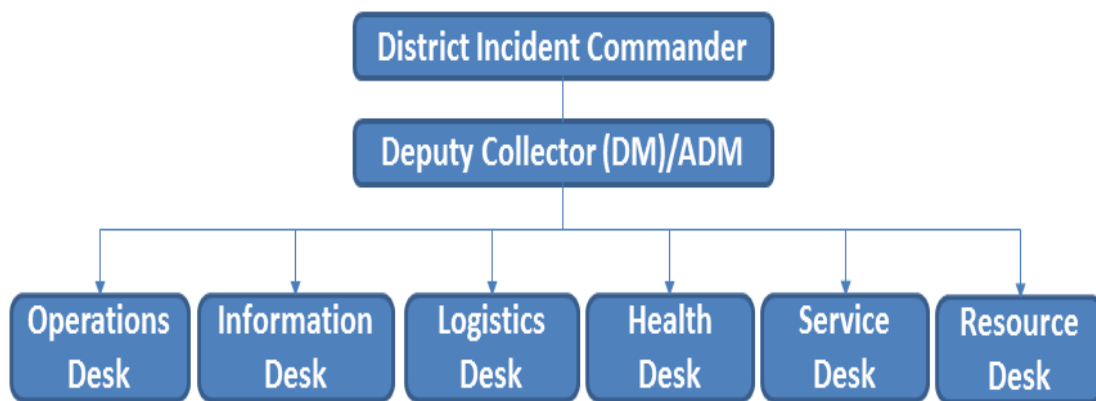

FIGURE 12: FLOW CHART ON INCIDENT COMMAND SYSTEM

Operations Desk

SEOC – Dedicated & trained staff; DEOC - Police and Fire & Rescue

- Monitoring field level rescue and evacuation operations
- Monitoring salvage operations
- Requisition of accommodation, transport and other necessary equipment for relief groups

- Maintain law and order
- Regular updates to the EOC regarding relief operations

Information Desk

SEOC – Dedicated & trained staff; DEOC – Land Revenue

- Communication of weather reports and warnings and subsequent updates
- Dissemination of information
- Keep contingency plans along with all necessary maps in ready to use condition
- Maintenance of important telephone numbers, database on available resources, list of key persons
- Send and receive messages and maintain records of the messages
- Maintain information of damage, materials sent and ongoing activities for immediate sharing with Emergency Operation Centre

Logistics Desk

SEOC – Dedicated & trained staff; DEOC – Transport Department

- Assess the need in terms of manpower and resources and ensure regular supply
- Ensure proper storage and transport facilities for relief materials
- Maintain adequate supply of necessary transport and equipment
- Coordinate with private transport associations and boat association for emergency requirement
- Organize transportation for rescue party, evacuated people medical terms and injured or sick people

Health Desk

SEOC – Dedicated & trained staff & the State Level Nodal Officer of Health Department; DEOC – Health Department

- Organize treatment of injured and sick, disposal of carcasses
- Preventive Medicine and anti-epidemic measures are taken
- Maintain record of all activities
- Maintain adequate supply of medicines, equipment and personnel

Service Desk

SEOC – Dedicated & trained staff; DEOC – Land Revenue

- Overall coordination of rescue and relief operations
- Assessing the relief, search and rescue and cash compensation requirements

- Organize and co-ordinate setting up of relief camps
- Ensure adequate supplies to the camps
- Coordinate identified NGO activities to ensure community participation
- Reporting the procurement and disbursement of relief material received from all sources
- Organize construction of temporary shelters, school buildings, medical facilities etc.
- Maintenance of cash and disbursements receipts, issue of relief materials, T.A & D.A of relief duty staff, daily wages, cash and credit vouchers, gratuitous and compensation paid, etc.
- Issuing of all cash and material receipts
- Reimbursement of all expenses approved
- Issue of cash vouchers for petrol and diesel

Resource Desk

This desk shall be handled by the respective department as per the ESF Plan **Annexure 37**.

Incident Response will involve three elements: (a) Coordination, (b) Incident Command Teams and (c) Specialized Tactical Resources. The Coordination element will have the Headquarters Teams at the National, State and District levels. The Incident Command Teams will be responsible for on-scene management and formed at the district and state levels. As shown in the organizational chart, the following will be the eight core positions in the Incident Command Teams:

- i. Incident Commander
- ii. Operations Section
- iii. Planning Section
- iv. Logistics Section
- v. Finance/Administration Section
- vi. Safety Officer
- vii. Liaison Officer
- viii. Information Officer

The Specialized Tactical Resources are being formed at the National or State levels having technical expertise in areas like handling hazardous material, carrying out search and rescue, running field hospitals, etc. Such resources will be integrated into the Incident Response. The System Institutionalization component will have three elements of (a) Training (b) Certification and Qualification and (c) Publications. The activities under this component will ensure that suitable personnel are identified, trained and certified to perform their assigned responsibilities for Incident Response.

3.4.4 District level incident response

At the District level, there will be one District Headquarters Team with the primary function of assisting the District Collector in handling tasks like general coordination, distribution of relief materials, media management and the overall logistics. In addition to the District Headquarters Team, there will be one or more District-level Incident Command Teams (DICTs) which can be deployed at the site of a complex emergency/ disaster. Suitable officers from the district administration will be carefully selected and professionally trained for the different ICS positions in order to constitute the District-level Incident Command Teams. As and when required, these DICTs will be deployed at the site of an emergency/disaster for on-scene management. The teams will focus on the operational aspects of response management, duly supported by other functions in ICS, e.g. Planning, Logistics, Finance/Administration, etc. The officers drawn for this assignment will be carefully selected by the District Collector depending upon their fitness, ability and aptitude for any of the DICT positions and they will be professionally trained to fulfil their assigned roles. Arrangements will also be made for ensuring their mobilization in a time-bound manner for their deployment to the trouble spot. Due consideration for the appropriate level of seniority will be given while constituting the teams. Although by and large, the team personnel may be selected from the General Administration/Revenue Department which traditionally handles disaster response in our country, the option to pick up willing and capable personnel from any other department for taking up specific positions in the DICT will be left open. For some positions, a suitable number of additional personnel will be trained as reserve for taking care of contingencies like transfers, promotions, etc.

For the position of the Incident Commander, a suitable officer of the rank of Additional District Magistrate will be preferred. The District level Incident Command Teams will function under the overall control of the Collector/District Magistrate. The State Governments can also deploy the DICTs to other districts depending upon the magnitude of the disaster. The District-level Incident Command Team core management structure is shown in figure 3.4.

3.5 POWERS AND FUNCTIONS OF DDMA

The DDMA shall establish a proper chain of command system for planning, coordinating and implementing schemes for effective management of disasters and organize the activities of all agencies responsible for disaster management in the District. The ICS will provide information on facilities, equipment, personnel, procedures and communications operating within a common organizational structure, DDMA has the authority to make any necessary institutional arrangements, assign responsibilities and modify any existing administrative mechanism or procedure to effectively accomplish the specified objectives pertinent to an incident.

TABLE 24: DIFFERENT LEVEL STAKEHOLDERS AND THEIR RESPONSES

	Primary	Secondary	Territory
Early Warning	Indian Meteorological Department (IMD): Weather Warnings, Central Water Commission (CWC): Flood Warnings, Geological Survey of India (GSI)/ National Centre for Earth Science Studies (NCESS): Landslide Warnings, Indian National Centre for Ocean Information Services (INCOIS)/ National Centre for Earth Science Studies (NCESS): Wave Height & Tsunami, National Emergency Operations Centre (NEOC)/ State Emergency Operations Centre (SEOC): Any of the above, Government: Any of the above	District Emergency Operations Centre (DEOC)/ District Collector: Events without precursors such as accidents/earthquakes, Revenue	Fisheries, Coast Guard, Police,
Information Dissemination	PRD, BSNL, SEOC	FM radio, other mobile Network Providers	Existing wireless operators (Police, Fire Force etc).
Emergency Support Functions	Refer to Annexure 37	PWD, Food & civil supplies	Animal Husbandry, KSEB, KWA
Advisory & Training	Administrative Training Institutes (ATI)	Taluk, NGO	Chemical Industries

TABLE 25: POINT OF CONTACTS FOR VARIOUS DEPARTMENTS

Departments	Officer in charge(Designation)
Revenue Department	O Mohammed Aslam, Additional District Magistrate, Kannur Collectorate. Phone No:0497 2700577
Fire & Rescue	Asharaf Ali K M, Assistant Divisional Officer, Fire and Rescue, Kannur. Phone No: 9497920121
Police	V N Unnirajan IPS, Superintendent of Police, Kanuur. Phone No: 9497996973

FINANCIAL ASSISTANCE

As per the National Disaster Management Act, 2005, various financial provisions are available at District level for implementation of the plan.

4.1 FINANCIAL INSTITUTIONS IN THE DISTRICT

A large number of banks are functioning in the district including private banks. The Syndicate Bank is the leading Bank in the district. It has branches in important places. Other than this banks the branches of State Bank of India and its Associates, Bank of India, Federal Bank, Bank of Baroda, South Indian Bank, Indian Overseas bank, etc are the main Banks having several branches in the district.

***Details of Financial Institutions in Annexure 29**

4.2 FUNDS AVAILABLE AT NATIONAL AND STATE LEVEL

TABLE 26: STATE LEVEL FUND DETAILS

State	2009-10	2010-11	2011-12	2012-13	2013-14	Total
Kannur	8,88,03,709	7,97,60,000	10,09,26,770	13,44,12,121	16,37,55,157	97,15,60,357

**Details in Annexure 30*

4.3 FUNDS IN 13TH FINANCE COMMISSION

Government have sanctioned Rs.16,00,000 (Sixteen lakhs only) for the procurement of essential equipment for strengthening/setting up of the emergency operations centre functioning in the district under the head of account of “2245-80-102-97” capacity building in the administrative machinery for better handling of disaster response.

4.4 CHIEF MINISTER’S DISASTER RELIEF FUND (CMDRF)

TABLE 27: CMDRF FUND DETAILS

Financial Year	2009-10	2010-11	2011-12	2012-13	2013-14
Amount Received in (Rs.)	1,63,64,150	1,12,84,792	2,45,00,000	12,09,50,000	4,98,00,000
Expenditure in (Rs.)	1,62,80,105	1,10,10,169	2,42,24,583	9,56,83,210	5,86,20,378

PLANNING & RESPONSE STRUCTURE

5.1 CRISIS MANAGEMENT FRAME WORK

An effective response is the result of a comprehensive crisis management program that orchestrates well developed decision-making framework that rightly aligns various incident and site-level response activities. The ability to manage a crisis successfully is the result of understanding the risks and vulnerabilities involved, comprehensive planning, regular exercises, and a strategy for maintaining these capabilities to deal disasters regardless of type, location and intricacy.

5.2 HAZARD SPECIFIC CRISIS MANAGEMENT PLAN FOR THE DISTRICT

5.2.1 Flood

TABLE 31: FLOOD CRISIS MANAGEMENT PLAN FOR THE DISTRICT

Source of Information- IMD: http://imdtvm.gov.in	
<p>Extremely Heavy Rainfall (>244.4mm)</p>	<p>Most Vigil - Actions to be taken and sustained till warning is withdrawn in the villages/taluks/districts predicted to be affected by rainfall</p> <ul style="list-style-type: none"> • SEOC & DEOC – Keep checking the tsunami bulletins from the INCOIS site. • State-District –Taluk Control Rooms of Revenue & Police-24hours functioning • NDRF, SDRF and Fire and Rescue Service – pre-positioned as per the direction of State Incident Commander • BSNL and Police – deploy emergency communication systems • Hospitals and PHCs in the villages predicted to be affected by rainfall – function at full strength 24 hrs • Tahsildar – Start the relief camps; Quarry blasting to be banned until atleast 24 hrs of rain free situation arises in the quarry locality based on evaluation by the village officers • Local Self Governments – relocate vulnerable population to the relief camps and other safe locations • Transport department – take control of all cranes and earthmovers in the district for deployment in the event of major calamities • KSEB & PWD – Emergency repair teams to be ready for deployment • District Officers of KSEB, PWD, Health, Irrigation & Transport – to be available at the respective district collectorates • Police – Stop vehicular traffic other than that of emergency services via ghat roads prone to landslides and flash floods; ensure strict oneway system for vehicle movement • Declare holiday for all educational institutions • All mass gatherings and social events to be stopped • Public adviced to remain indoors and those in landslide/flood prone areas to move to safer locations. Voluntary evacuation warning to public living in the flood prone areas of the district (based on the list of hazard prone villages published in

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

	<p>www.sdma.keral.gov.in; disasterlesskerala.org)</p> <ul style="list-style-type: none"> • Tourism & Forest Departments – Advise tourists not to stop in the sides of streams and rivulets that intersect Ghat (Hilly) roads and take bath in streams and bathing ghats when it is raining as these are possible tracts of landslides & flashfloods; close all hill stations and resorts in coastal and low lying areas and evacuate public to safer areas
<p>Very Heavy Rainfall (124.5 to 244.4 mm)</p>	<p>Be prepared - Actions to be taken and sustained till warning is withdrawn, in the districts predicted to be affected by rainfall</p> <ul style="list-style-type: none"> • DEOC – Emergency time functions activated • Deoc, District – taluk Control Rooms of Revenue and Police – 24 hrs functioning • SDRF and Fire and Rescue Service – pre-positioned as per the direction of State Incident Commander • Army, Navy, Air Force, Coast Guard and other central forces in the state – informed • Hospitals and PHCs – ensure doctors and paramedical staff are available on call • Tahsildar – take control of the identified relief shelters; Quarry blasting to be banned until atleast 24 hrs of rain free situation arises in the quarry locality based on evaluation by the village officers • Local Self Governments – advice public to restrain from standing near and crossing streams and avoid traffic through ghat roads • Transport department – ensure that cranes and earthmovers in the district are ready for deployment in the event of major calamities • KSEB & PWD – Emergency repair teams to be ready for deployment • Police – Stop vehicular traffic other than that of emergency services via ghat roads prone to landslides and flash floods • District Officers of KSEB, PWD, Health, Irrigation & Transport – to be available on call to District Incident Commander • Tourism & Forest Departments – Advise tourists not to stop in the sides of streams and rivulets that intersect Ghat (Hilly) roads and take bath in streams and bathing ghats when it is raining as these are possible tracts of landslides & flashfloods • Voluntary evacuation warning to public living in the flood prone areas of the district (based on the list of hazard prone villages published in www.sdma.keral.gov.in; disasterlesskerala.org)
<p>Heavy Rainfall (64.4 to 124.4 mm)</p>	<p>Be updated - Actions to be taken and sustained till warning is withdrawn, in the villages/taluks/districts predicted to be affected by rainfall</p> <ul style="list-style-type: none"> • SEOC – All state level officers of the nodal departments informed • DEOC – Emergency time functions activated • District Control Rooms of Revenue & Police-24hours functioning • Tahasildar – ensure that shelters are available if needed; Quarry blasting to be banned until atleast 24 hrs of rain free situation arises in the quarry locality based on evaluation by the village officers • Transport department – take control of all cranes and earthmovers in the district for deployment in the event of major calamities • KSEB & PWD – Emergency repair teams to be ready for deployment • Tourism & Forest Departments – Advise tourists not to stop in the sides of streams and rivulets that intersect Ghat (Hilly) roads and take bath in streams and bathing ghats when it is raining as these are possible tracts of landslides

5.2.2. Landslide

TABLE 32: LANDSLIDE CRISIS MANAGEMENT PLAN FOR THE DISTRICT

Source of information – SEOC: www.disasterlesskerala.org	
Criteria:	
<ol style="list-style-type: none"> 1. When IMD issued very heavy rainfall warning 2. When two days of cumulative rainfall exceeds 8cm in a rain station, landslide warning is issued to the respective district 	
Land slide Alert	Be prepared – Actions to be taken and sustained till warning time limit expires/ until 2 days cumulative rainfall is below 8 cm <ul style="list-style-type: none"> • SEOC-Telephonically verify the warning from INCOIS • SEOC & DEOC-Emergency time functions activated • State-District –Taluk Control Rooms of Revenue & Police-24hours functioning • SDRF & Coastal Police-deployed to the coastline • Army, Navy, Air Force & other Central Forces in the state- on high alert and standby • BSNL& Police-deploy emergency communication systems • Hospitals and PHCs in the districts functions at full strength 24hrs • Tahasildar- Take control of the identified relief shelters: Quarry blasting to be banned until 24 hrs of rain free situation arises in the quarry locality based on the evaluation by the village officers • Local Self Governments: Alert public living close to small rivulets and in hilly segments with greater than 20 degree slope

5.2.3 Tsunami

TABLE 33: TSUNAMI CRISIS MANAGEMENT PLAN FOR THE DISTRICT

Source of Information –INCOIS: http://www.incois.gov.in/Incois/tsunami/eqevents.jsp	
Warning	Most vigil- Action to be taken and sustained till warning is withdrawn in villages/taluks/districts predicted to be affected by tsunami
	SEOC-Telephonically verify the warning from INCOIS
	SEOC & DEOC-Emergency time functions activated
	State-District –Taluk Control Rooms of Revenue & Police-24hours functioning
	NDRF, SDRF& Coastal Police-deployed to the coastline
	Army, Navy, Air Force & other Central Forces in the state-deployed to the coastline
	BSNL& Police-deploy emergency communication systems
	Hospitals and PHCs in the districts functions at full strength 24hrs
	Tahasildar-Evacuate public within 250m from the coastline to the relief camp and other safe higher ground and start the relief camps
	Local self government – Evacuate public within 250m from the coastline to the relief camp and other safe higher ground
	Department of Ports &Harbour Engineering –Move all seafaring vessels to deep ocean
	KSEB & PWD-Emergency repair teams to be ready for deployment
District Officers of KSEB,PWD,health, Irrigation, transport, ports &harbour	

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

	<p>engineering – to be available at the respective district collectorates.</p> <p>Police-Stop vehicular traffic other than that of emergency services to the area predicted to be affected : ensure strict one way system for vehicle movement</p> <p>Declare holiday for all educational institutions in the taluks predicted to be affected by the event</p> <p>All mass gatherings and social events in the taluks predicted to be affected by the event is to be stopped</p> <p>Public within 250m from the coastline to be moved to higher ground and further inland</p> <p>Tourism dept. –Close all resorts within 250m of the coastline and lowlying areas in river- mouth/coastal estuaries and evacuate public to safer areas.</p>

Level	Vulnerability Magnitude	Observations	Impact	Response
1	Normal	Prepare & update resource inventory	Nil	All line Departments
2	Warning	Receiving warning information	Nil	IMD/SEOC
3	Emergency		Loss of life & property	
			Casualty to people	
			Mortality to cattle	
			Damage to power, telephone lines, cable networks	
4	Recovery (Post Disaster)			Agriculture dept.

Detailed Hazard Specific Crisis Management Plan in Annexure 36

5.3 ACTIVITY CALENDAR

TABLE 36: ACTIVITY CALENDAR

	Pre monsoon	During monsoon	Post monsoon
Health	<ul style="list-style-type: none"> • Training to all staff. • Awareness campaign and intersectoral co-ordination. • Identify outbreak prone areas from experience of previous year. • Identify high risk areas as per vector index. • Breeding container elimination campaign. • Clean public place campaign. • Clean water campaign. • Formation and rejuvenation of rapid response team. • Stock necessary drugs, insecticides, allied materials, test kits, disinfectants, larvicides, equipments etc. • Repair of fogging machines, sprayer etc. • Advocacy and sensitization meetings. • Plantation owner Meetings. • Active WHSNC for community action. 	<ul style="list-style-type: none"> • Intersectoral co-ordination Meetings. • Strengthen treatment facility. • Surveillance of diseases and outbreaks. • Dry day observation. • Intensive screening of immigrants for Malaria. • Release larvivorous fishes in wells and other water sources. • Aedes surveillance work. • Super chlorination of water sources. • Indor Residual Spray in Malaria reported areas. • Indor space spray and thermal fogging at Dengue reported areas. • Supply of Doxycycline for the prevention of Leptospirosis to high risk groups. • Public Health Act Implementation D&O Trade inspection. • Active campaign may organise if required. 	<ul style="list-style-type: none"> • Improve active and passive blood collection for Malaria detection. • Conduct regular screening of migrant to detect Malaria and Filarias. • Detection and elimination of breeding sources of Aedes Mosquitoes. • Detection and elimination of breeding sources of Anopheles mosquitoes. • Identify water scarcity area and work with LSGD to avail safe drinking water. • Conduct D&O trade Inspection regularly. • Campaign may be arranged if required.

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

Transport	Nil	<ul style="list-style-type: none"> • Shift peoples from coastal and flood prone regions to safe location. 	Nil
Irrigation	<ul style="list-style-type: none"> • Joint Inspection of Engineers from Mechanical Electrical and Civil Divisions to evaluate the preparedness for Monsoon. • Directions for the operation during monsoon issued to the Engineer in Charge of the Dam. (Separately attached). • Trial Run of the motors and hoisting Mechanism conducted to verify the operability during emergency. • Trees/ Branches of trees, or similar objects that may endanger the safety of Dams and buildings identified and actions taken to cut and remove them. • Alert message given to KSEB to provide un interrupted power supply for the shutter operation at all the time during monsoon. • Warning message given to the public regarding the shutter opening. • Generator arranged ready for hire to use in case of an emergency. 	<ul style="list-style-type: none"> • Operator, workers and officers constantly watching the water level and controlled the water level to avoid any possibility of a flood disaster. • Operators /workers arranged for night watching and duty log book maintained for recording the incidents and to bring to the notice of the Engineer in Charge immediately. • During heavy rains water level recorded in every hour. • Water storage level brought down to get enough time for opening all the shutters in case of an emergency. At the same time the required water level maintained for the pumping of Water Authority. 	<ul style="list-style-type: none"> • Maintenance to the shutters, Motors and hoisting mechanism dam body and related structures.
PWD	<ul style="list-style-type: none"> • Clearing drain, chalked culvert etc. to avoid flooding during monsoon and to make road traffic worthy. 	<ul style="list-style-type: none"> • Road making pothole free which have been formed during monsoon and road making traffic worthy, cutting and removing branches of tree and fallen trees. 	<ul style="list-style-type: none"> • Resurfacing arranging to rectify the damaged road surface.

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

Police	<ul style="list-style-type: none"> • Equipment and vehicles would be inspected ensuring the working condition. Men and officers will be alerted and briefed. 	<ul style="list-style-type: none"> • Police patrolling would be intensified. On emergencies, a Control Room become operational at District Police Office. 	<ul style="list-style-type: none"> • Nil
Revenue	<ul style="list-style-type: none"> • Maps and Survey sketches are provided to concerned departments so as to establish easy operation and administration procedure. 	<ul style="list-style-type: none"> • Maps and survey sketches relating various disasters occurring during monsoon season are generated and are distributed to the concerned line departments. 	<ul style="list-style-type: none"> • Maps and survey sketches relating various disasters occurring during post monsoon (if necessary) are provided to concerned departments.
Fire	<ul style="list-style-type: none"> • Vehicles and equipment's are being kept ready to meet any eventuality. 	<ul style="list-style-type: none"> • Attends emergency calls whenever required. 	<ul style="list-style-type: none"> • Nil
Agriculture	<ul style="list-style-type: none"> • Butter stock of paddy seeds will be made available by seed authority for resowing the flood damaged paddy areas. • Removal of silt and cleaning of water bodies with the assistance of MNREGS of GramaPanchayaths/LSGD (to avoid flood) • Construction of rain water harvesting structures popularizing. • Moisture conservation by mulching husk burial etc. • Improve drainage system- drainage channels are deepened before the onset of monsoon in all possible areas. • Propping of bananas/ Collar ringing method to avoid damage to bananas by wind. 	<ul style="list-style-type: none"> • Provide proper drainage in padasek harams clear canals near paddy fields. 	<ul style="list-style-type: none"> • Provide compensation for crop loss due to natural calamity.

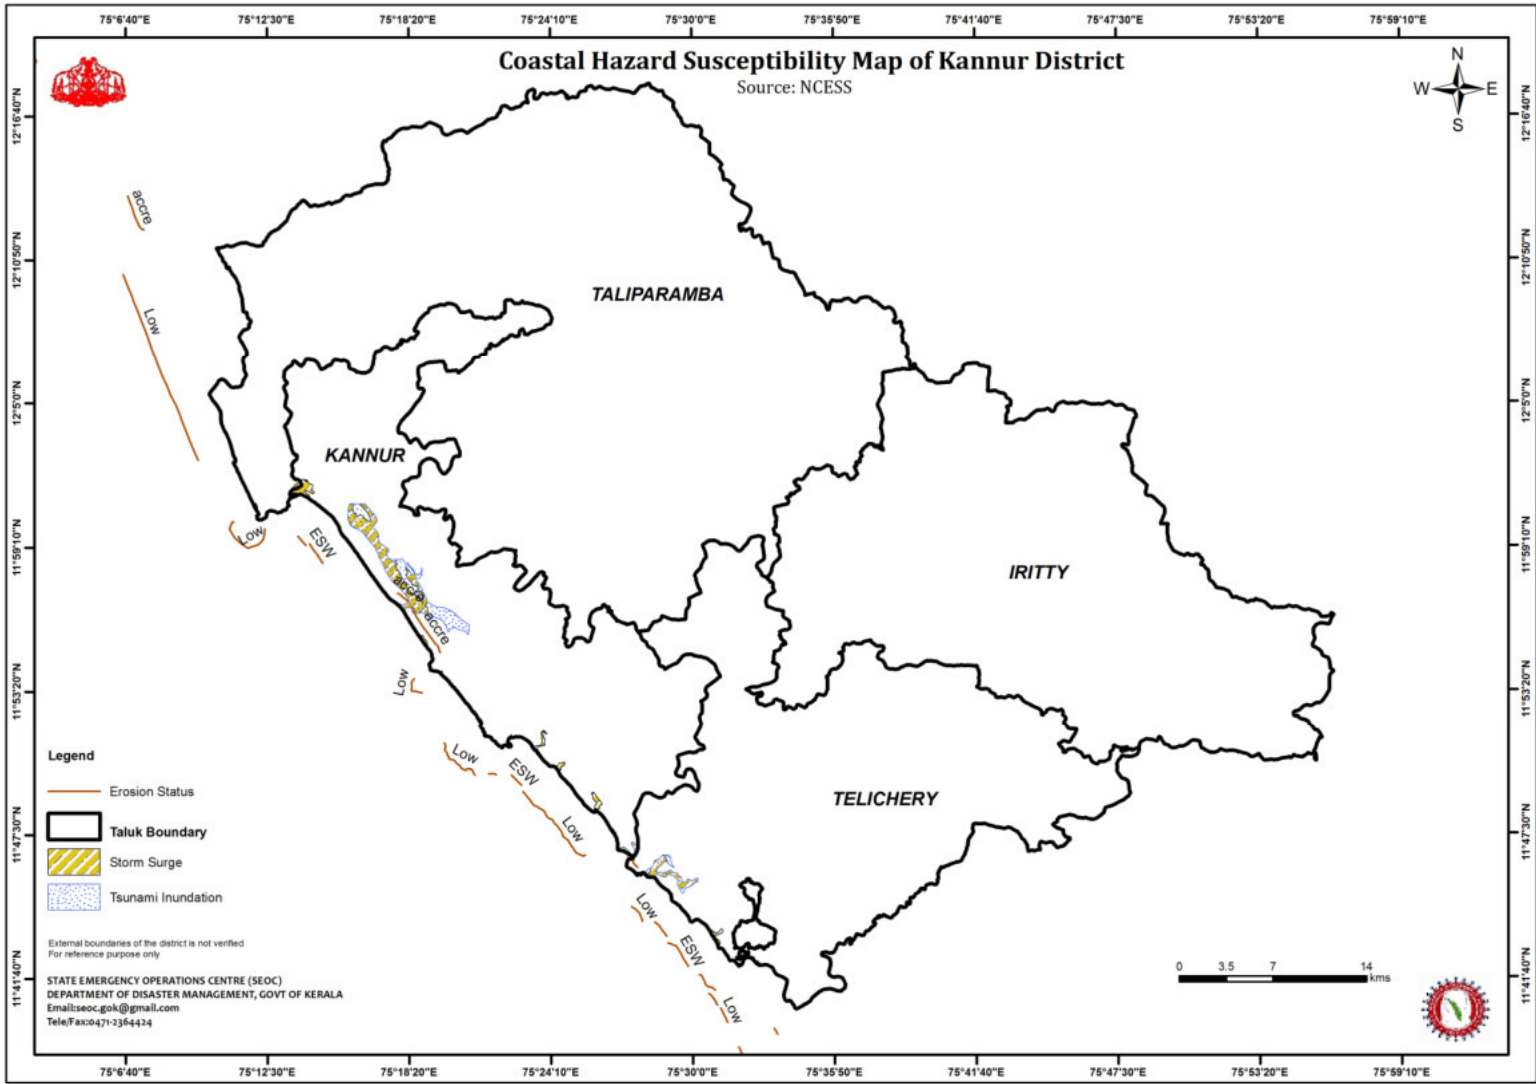

FIGURE 18: COASTAL HAZARD SUSCEPTIBILITY MAP OF KANNUR DISTRICT

5.6 RESPONSIBILITY MATRIX

The perils of hazard has to be negated with appropriate observation and focused activities, which necessitate the need of an ever vigilance forecasting system that will help in managing the disastrous effect of a hazard.

The structural frame work starts with identifying, evaluating and assigning well defined roles and responsibilities of various authorities in managing disasters. Experiences with previous disasters make it clear, that authorities have to be sensitized prior and subsequent to an unturned event. Thus, coordination among stakeholders for effective management of disasters is essential and to ensure this,pre planning must be done before the onset of a disaster and specific task must be assigned to each department so as to provide training in the specific areas.

TABLE 43: RESPONSIBILITY MATRIX

Time	Task	Department/ Agency
D-72 Hr	Warning and analysing in the information.	IMD,SEOC,INCOIS.
D-48 Hr	Evacuation, Arrangement of temporary shelters.	Revenue, Police, Coast guard.
D-24Hr	Mitigation Measures.	Revenue, Police, Fire & Rescue, Health, Navy,Coast Guard, NGO's, PWD.
D-0Hr	Activate the Incident Command System.	DDMA, Police, fire&Rescue,Health.
D+15 Min	Search and RescueProviding aids to affected people.	Revenue, Police, fire & Rescue, Health, Navy,Coast Guard, NGO's, PWD.

5.7 RECONSTRUCTION, REHABILITATION & RECOVERY MEASURES

DDMP would describe the strategy to restore normalcy to the lives and livelihoods of the affected population. Short-term reconstruction requires return of vital life support systems to minimum operating standards while long term rehabilitation will continue till complete redevelopment of the area takes place.

5.8 PREVENTION AND MITIGATION MEASURES

A better disaster management with minimum vulnerability is possible only by means of preparedness and mitigation measures. The maximum the disaster preparedness, the minimum the vulnerability. Neither a disaster can be prevented nor diverted to any other place. The only possible thing is to minimize the effect. The changing concept of disaster management has taken its birth in mere hypothesis. Today there is a paradigm shift in the approach to disaster management from a culture of relief and rehabilitation to that of preparedness and mitigation.

In the face of increasing menace of various hazards, mitigation would remain the key and the most effective strategy to reduce the risks of cyclone. Structural mitigation measures generally refer to capital investment on physical constructions or other development works, which include engineering measures and construction of hazard resistant and protective structures and other protective infrastructure. Non-structural measures refer to awareness and education, policies, techno-legal systems and practices, training, capacity development etc.

5.8.1 STRUCTURAL MITIGATION

Risk Mapping, Assessment and Analysis

The first and probably the most complex task of mitigation is to map the hazard, risks and vulnerabilities, analyze and assess the levels of risks and monitor it continuously. It is only on the basis of such a knowledge base that a proper and effective strategy for mitigation and preparedness can be developed.

Sea Wall and Embankments

Among the structural mitigation measures sea walls and embankments are probably the most effective and capital intensive investment to mitigate the risks of water and climate related disasters. If sea walls are essential to protect coastal cities and harbors, saline water embankments are recommended to protect rural settlements and to prevent saline water ingress into agricultural and horticultural land. Further, saline embankments have the potential to kill the mangroves due to choking of saline water. Therefore such embankments should be constructed in limited areas where vegetative protection would not be adequate to prevent the ingress of saline water into habitations. Construction and protection of all the flood protection embankments, ring bunds and other bunds are very useful in preventing the flooded water to get into the agricultural land. Dams and levees can also be constructed which can be used as temporarily storing space which reduced the chances of lower plains getting flooded.

FIGURE 19: EMBANKMENT MADE IN A RIVER TO REDUCE THE INTENSITY OF FLOOD

Bio-Shields

Bio shields usually consist of mangroves, casuarinas salicornia, laucaena, atriplex, palms, bamboo and other tree species and halophytes and other shrub species that inhabit lower tidal zones. These can block or buffer wave action with their stems, which can measure up to 30 meter high and several meters in circumference. They trap sediment in their roots; thereby maintain a shallow slope on the seabed that absorbs the energy of tidal surges. They also break the high velocity of winds and thus protect agricultural crops and shelters besides providing shelter and grazing lands for the livestock and farms. They reduce evaporation from the soil, transpiration from the plants and moderate extreme temperatures. They protect fertile coastal agricultural land from erosion. Systematic regeneration of the bio-shields in the coastal belts wherever feasible is the most natural and cost effective method of protecting these areas from storm surges and erosion.

FIGURE 20: MANGROVES ACTS AS A BARRIER AGAINST THE STORM SURGES AND TSUNAMI WAVES

Shelter

A large number of people in the coastal areas live in thatched houses which cannot withstand the high velocity of various types of disasters resulting in extensive damages of such houses and deaths and injuries of a large number of poor people. The poor economic conditions of the people may not permit them to rebuild their houses as per the disaster resistant designs and specifications. Therefore, community shelters constructed at appropriate places within the easy access of the habitations of the vulnerable communities can provide an immediate protection from deaths and injuries due to the collapse of houses. Such shelters are spacious enough to accommodate a few hundred people of the neighbouring hamlets and provide provisions of drinking water, sanitation, kitchen, etc. During the normal season such shelters can be utilized as schools, dispensaries or other community purposes.

Disaster Resistant Housing & Infrastructure

The loss to the houses and other infrastructures during disasters is mainly due to the absence of appropriate design criteria for construction of buildings and infrastructure which can withstand the pressures of such disasters. Bureau of Standards of various countries have developed revised design norms which are followed for new constructions. However, the compliance standards of such norms have not been very effective largely due to inadequacies of properly trained engineers. The problem is even more complex for the large number of existing structures that have already been constructed without adherence to the revised norms. Such buildings can only be retrofitted with an additional cost which the house owners find reluctant to invest. Various advanced countries have passed legislations which has made retrofitting mandatory. In the developing countries the focus is confined more to strengthening the lifeline buildings which would play a critical role during emergency operations such as hospitals, emergency operation centers, police control rooms etc, leaving other unsafe structures and habitations as 'acceptable risks', for which adequate preparedness measures should be developed.

Early Warning and Communication

Early warning of disasters and its dissemination to the community is an important preparatory measure to reduce the losses of life and property during disasters. Due to heavy investments involved in the installation, operation and management of modern early warning system, it is also considered as an essential component of structural mitigation. For example, powerful Doppler radar systems can now track the movement of atmospheric depression and accurate early warnings can be issued 48-72 hours in advance about the probability of cyclone, its intensity and

wind speed, direction and possible location of the land fall. Such warnings are broadcast through the radio and television network for the information of people in the vulnerable areas. Based on the data generated by the system numerical modeling on storm surge and flooding can forecast the inundation level from where the affected population can be evacuated to safer places.

5.8.2 NON STRUCTURAL MITIGATION

Community Based Disaster Preparedness

Communities are the first real time responder to any disaster situation. However developed or efficient a response mechanism could be there would always be a time gap between the disaster and the actual response from the government and other agencies. Therefore if the communities are mobilized and trained to assess their own risk through participatory risk assessment process, develop their own contingency plans and set up their own teams for evacuation, search and rescue, emergency shelter, first aid etc, the risks of disasters can be managed with significant reduction in number of deaths and injuries.

Risk Transfer and Risk Financing

Mounting economic losses due to disasters cannot be compensated by the Government whose role would be limited to providing ex-gratia relief to the next of kin of persons who have died or to those sustained injuries and to provide support for the reconstruction of houses and livelihood regeneration for the poor and lower middle class people. Government support would also be necessary for reconstruction of the damaged public assets. The risks of industrial, commercial and other infrastructure and assets in the private and household sector can only be secured through the mechanism of risk financing and risk insurance. As the country develops, the share of private sector in the GDP would increase and, therefore, risk financing would be assuming increasing importance. In the developed countries nearly ninety percent of the assets are covered by insurance against natural disasters which has encouraged collateral investment on disaster resistant housing and infrastructure so as to reduce the premium for insurance. This has been a win-win situation for the private and individual sector in transferring their risks to the insurance companies, for the insurance companies in generating business and for the government in reducing its expenditure on relief and reconstruction while at the same time encouraging private investments for better safety standards for buildings and infrastructure. The experiences gained in this regard need to be further adapted according to the conditions of low and middle income countries. Various innovative services and products like micro insurance, micro credit etc. have been developed in many countries for increasing the resilience of local communities. Micro credit is particularly playing an importance role in retrofitting the vulnerabilities of the poorer sections of the community, especially the women, in the developing countries.

Capacity Development and Training

Capacity development is the most cost effective method of reducing the vulnerabilities of the people living in the vulnerable areas. The vulnerable communities have a certain degree of capacities built into their social systems and practices acquired through inherited experiences of generations. But such indigenous capacities are often overwhelmed by the vagaries of nature due to various anthropogenic factors like the degradation of environment, changing land uses, pressures of population on settlements, climate change etc. Therefore, the local capacities have to be continuously upgraded and further developed according to the changing needs and the developments of science and technology and other improved practices in various sectors. The challenge of capacity development is to transfer the new horizons of knowledge into actionable modules at the local levels for the local people by the local community. Such capacities can be developed through meetings, interactions, discussions, exposure visits and trainings. Training is particularly necessary for cutting edge functionaries within and outside the government at various levels in different sectors to impart them with necessary skill for disaster risk reduction and management. Training programmes have to be practical, scenario based and exercise and problem solving oriented so that the functionaries are aware of their specific responsibilities and are able to discharge those responsibilities efficiently before, during and after the disasters. Training is also required for those community members who would be part of the community response teams for the initial critical hours and days till specialized assistance from the government and non-governmental agencies from the outside are organized. Such trainings may include maroon search and rescue, first aid, evacuation, temporary shelter management, arrangements of drinking water and sanitation, provision of cooked food etc. Such trainings can be better organized by a core group of community trainers who can be trained intensively by the specialized government and non-government agencies.

Awareness and Education

While training and capacity development target specific groups according to their specific training needs, awareness generation is more of a general in nature which sensitizes common masses about the risks, vulnerabilities of disasters and the preventive, mitigative and preparedness measures that can be taken at the government, community, household and individual level. Electronic, print and folk media can play important roles in awareness generation on a large scale. Awareness and sensitization programme can also be organized for more specific and limited audience such as parliamentarians, policy makers, media and other selected audience. Disaster management has already been included in the educational curriculum

of the schools in many countries. For example, civil engineering and architectural courses can have curriculum on earthquake resistant housing and infrastructure. Medical and mental health sciences can have course module on emergency health and trauma management for cyclone affected people, while IT and Communication sciences may have courses on Early Warning and Communication. Such curriculum at various levels of general and professional courses would help to develop necessary professional expertise to support the disaster risk mitigation and preparedness programmes of the government and other agencies at different levels.

Contingency Plans

The disastrous consequences in the absence of a pre-disaster contingency plan have been demonstrated repeatedly in many countries on a number of occasions. Therefore, one of the most critical elements of disaster risk management is to have a contingency plan in readiness, which would clearly delineate the roles and responsibilities of various agencies within and outside the government, define the exact functions to be performed by them, the process to be followed in the performance of these functions, the tools and equipments to be kept in readiness, procurements to be made, evacuation drills to be followed, the emergency medical plan to be put in place etc. Such a contingency plan should be prepared vertically at the national, provincial, district and sub-district and community level and horizontally for the different sectors – police, civil defence, health, fire services, food and civil supplies, agriculture, fisheries, water supply, roads and bridges and so on.

Standard operating procedure should be laid down for each activity to avoid any confusion and to ensure coordination among the various agencies involved in the response, relief, rehabilitation and reconstruction programmes after the disasters. Such contingency plan should be reviewed periodically to update them according to changing situations and also to create awareness among all the stakeholders. The best way to keep the contingency plan in readiness is to conduct mock drills at least once in a year so that the operational difficulties in implementation of the plan are sorted out at the ground level and the various agencies within and outside the government can work together in a coordinated and efficient manner when the disaster would actually strike. Such mock drills again should be conducted at various levels to ensure operational readiness of the system.

5.9 PREPAREDNESS PLAN

The basic responsibility for undertaking rescue, relief and rehabilitation measures in the event of disasters is that of the District Administration. The role of the State Government is only supportive especially in terms of finance, warning, transport etc. Natural disasters can be minimized by a well prepared warning system combined with preparedness and man-made

disasters can be minimized by stringent implementation of Rules and by proper education. A community, receiving proper warnings of impending hazards can resort to precautionary and mitigation measures.

Identification of the most vulnerable location is the foremost action in this regard. Digital map of the District with spatial and non-spatial data shall be prepared in appropriate scales. The maps of the Survey of India will be supplemented for information relating to specific and individual disasters. Drawing of a blueprint of action, agencies to be involved, resources and funds will be made. The database of **GIS** and **GPS** will be obtained. Current information and climate, weather and structures will be compiled and brought on one platform so as to support the disaster management activities of each agency.

Collection of history of previous disasters is an essential aspect for future planning. The database will contain also the land use system in the district, infrastructures availability such as road, rail, hospital, communication facility, geography etc. A systemized functioning system by accepting governmental aids and also the non-governmental support will be made functional. Each participating department will have its own preparedness plan which will be linked to the district plan and then to the State plan.

The district has no independent forecasting system. The Meteorological department is the only access to forewarn the possibility of a range of disasters. The information received from the Meteorological Department is passed to the community as well as to the Mitigation Machinery from time to time. These communication links, forecasting and control rooms will be improved by modernizing the existing facilities. The present rain-gauges network is too coarse and a rainfall analysis based forecasting system has to be encouraged. Drought prediction is comparatively easier than all other natural disasters and drought is a recurring phenomenon in this district for the past decades. There is no Ocean or Cyclone observing system in the district. There is also no design of tide-gauge to see sea-erosion. The forecasts of the meteorological department are depended upon for these. It is essential to modernize the computerized whether forecasting system of Meteorological Department.

Generally, nearby schools, A.D systemized .Shelters, Health Centres, building of private clubs/Organization are used as temporary shelters for human dwellings and animals in the event of a disaster in this District. School buildings are available in plenty in the surroundings and these buildings are used also as go-downs for storage of food, fodder and other essential relief materials. The prevailing Public Distribution System in the district meets the local requirement during such incidents. These systems are periodically alerted to cope up with any possible hazards.

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

For flood fighting, GramaPanchayaths give prominence to construct bunds across the rivers and rivulets in their plan activities. No people are allowed to reside along the extreme banks of the rivers. A scenario building exercise will be undertaken each year before the onset of the monsoon or drought and the district machinery is properly geared up to overcome the hazards. The Police, Para Military Forces, the Coast Guard, the Fire Force and the Health department are properly channelized for better management before the insurgence. Control rooms running 24 hours will be opened in the Collectorate, Taluk Offices and Fisheries office well before the monsoon with proper co-ordination at the district level with A.D.M. as its head. The mobile phones have created a revolution in the field of communication and its use in the mitigation activities is second to none. The communities itself are the first responders for rescue of disaster victims and their role is also important. The service of N.C.C., Scouts & Guides, NSS volunteers and other NGOs are also incorporated into the local level relief activities and they have created a ground level awareness among the people.

Administrative Preparedness for Different Hazards.

RESPONSE PLAN

Response system is a very primary thing for every type of situation. Inter – agency response between the Revenue – Police, Fire Force, Health, Agriculture, P.W.D., Local Governments etc and vice-versa will give rapid results in the mitigation activities. The District Administration has a good relationship within the participating departments. The response time is minimized through effective communication measures. The communities are well educated in quick response mechanism and therefore the vehicle of management could be put into motion within no time. Early warning showing the level and magnitude of the disaster is a good parameter so that the quick responders can mobilize maximum preparations to minimize the loss. Being a small district, any part of the district is accessible within an hour or two. A proper mechanism has been set up in the district for the co-ordination of the different levels of Govt., different departments and the NGOs. In cases of disasters of rare severity, a senior Revenue Officer will be deputed to the site for overall control as ' **Incident commander** '. A control room will be set up in the Collectorate immediately and also at the site, if possible. A senior officer will head the control room. All communication means such as web, fax, telephone, mobile phones Ham radios etc. will be utilized. There are 13 HAM Radio Operators in the District (Annexure-5). Due to the

popularity of the mobile phones, community level communication has been improved considerably. Telephone numbers of all such centres will be given wide publicity.

For search and rescue work, we depend mostly on the local experts on the first hand and next the Fire Force, the Coast Guard and the Navy. The D.M.O. will constitute the Disaster Medical Assistance Teams and will rush to the site. Postmortem will be arranged at the site itself if there is no objection from any level. For the transportation of the victim, all kinds of available vehicles will be used. Rapid damage assessment will be done by the Agriculture/PWD or the concerned departments.

Health and the medical care is one of the most critical and immediate response components in any disaster especially epidemics. Adequate planning for hospital preparedness for mass casualties, Mobile hospital, epidemic prevention and Trauma counselling will be done. Disaster specific Medical Plan would be incorporated based on the Socio cultural needs. Focus is given on children, women, aged and the disabled. It includes first aid facilities and water and sanitation needs also. The district is highly vulnerable to Malaria, Cholera, Dengue Fever, Jaundice, etc. due to its proximity to Mangalore town even though there was no high out breaks so far.

For biologically related disasters, the Health authorities will develop a rapid response mechanism.

A Control Room will be set up with all modern equipments working round the clocks. The duties and responsibilities of each Staff in the Control Room will be designed well in advance and will be made responsible for their slackness.

The following agencies have been authorized for the pre-disaster warning in the district.

TABLE 52: AUTHORISED AGENCIES FOR PRE DISASTER WARNING

Disaster	Agency
Flood	Meteorological department
Sea Erosion	Meteorological department
Adverse climate	Meteorological department
Biologically related	Health department
Land slides	Meteorological department
Accidents	Police Department
Fire	Fire Brigade

For warning the public, alarms, sirens, public announcement through loud speakers, radio, local channels will be utilized. Once warning is issued arrangements for evacuation will be undertaken. Shelters will be made ready within 5 km distance with alternate routes for

transportation. For transportation, the vehicles of KSRTC will be used. Evacuation will be undertaken with the help of local leaders, the NGOs and the Police for appropriate security and Law and Orders. The rescue camps will be supervised by a senior Civil Officer. A Medical Officer will always be available in the camps. The seriously injured, sick, old, children and woman will be given special care.

The following agencies have been conceptualized to carryout immediate response activities.

TABLE 53: AUTHORISED AGENCIES FOR IMMEDIATE RESPONSE ACTIVITIES

Activities	Agency
Communication	BSNL
Health & sanitation	District Medical Officer
Power	KSEB
Transport	KSRTC & RTO
Search & Rescue	Fire Brigade, Coast Guard, Navy
Relief supply	Tahsildar & D.S.O.
Water Supply	K.W.A
Shelter	Revenue Department
Public works	P.W.D
Media	District Information Officer
Co-ordination	Addl.District Magistrate/ Deputy Collector (Gnl)
Collection of Valuables	Revenue Department

These agencies will co-ordinate with their functional sub-ordinates in the event of disaster and arrange for immediate relief measures. They will prepare an inventory of the concerned activity and available infrastructure relating to their department.

5.10 RECOVERY

Disasters can and do destroy property, adversely affect the livelihood of people, undo development initiatives and damage public infrastructure and facilities. The affected people and the communities often require support, both in tangible and intangible form, to regain normalcy and start life afresh from where it got disrupted. Each disaster could be considered as an opportunity to reinforce the resilience of the communities and the resistance of the infrastructure, so that adversity of the future disasters could be minimized.

Recovery is defined “as assisting of persons and communities affected by emergencies to achieve a proper and effective level of functioning.” In the immediate aftermath of an emergency, and over the longer term, recovery is concerned with:

- The physical aspects of restoration and reconstruction of damaged community infrastructure and private housing;
- The economic aspect of restoration of productive activity and local employment;
- The social, financial and psychological aspects of personal, family and community functioning

Recovery arrangements are designed to embody an enabling and supportive process that allows individuals, families and communities to move through the recovery process. This is achieved by the provision of information, specialist services and resources. The Recovery process is therefore a long-term process in which everyone has a role – the Government including the self-government institutions, the NGOs, and especially the affected people, their families and the community.

An emergency may be localised in its effects such as in a single house fire or a road or train accident, or it may have much more widespread consequences, as in the case of a major cyclone or flood. There may be a need for community support, whether the cause is ‘natural’ or ‘man-made’. The capacity of people to recover from a disaster using their own resources varies, depending on the circumstances of the disaster as well as on the nature of their community. Repeated occurrence of disasters, on one hand, has fortified the coping mechanism of the communities, but on the other, has trapped them in a vicious cycle socio-economic vulnerability. It is required to take up long-term disaster proofing measures to enable the communities to get out of the vicious circle and minimise their vulnerability.

Assistance provided will be adapted to meet the basic needs of those affected, with a focus on the most vulnerable sections of the people. After disasters, special recovery measures are necessary for vulnerable groups like people with disabilities, widows, orphans, children and uncared elders. The recovery plans will also be gender sensitive and include cultural and biodiversity components. This requires sensitivity and extensive consultation with the affected people and communities and the inclusion of psychosocial expertise in the recovery team. Assistance may include material aid, temporary accommodation, financial assistance, counselling and personal services, information and community support and can come from a range of sources.

Experience demonstrates that recovery is best achieved when affected communities exercise a high degree of self-determination. It should be seen as a developmental process through which communities attain a proper level of functioning rather than merely returning to the previous level of functioning.

Recovery involves much more than replacing what was destroyed and rehabilitating individuals. It also involves a complex social process, which involves the whole community, and is best achieved when the affected communities exercise a high degree of self-determination. Recovery should be regarded as a developmental, rather than merely as a remedial process.

Agencies responsible for recovery management will be encouraged to incorporate the following principles into their recovery plans.

- Recovery from a disaster is an enabling and supportive process that allows individuals, families and communities to attain a proper level of functioning through the provision of information, specialist services and resources.
- The process has to be properly planned, clearly understood and effectively executed by recovery agencies, response agencies and the community. For this purpose requisite training need be imparted to the community and the people executing it.
- Recovery management arrangements are most effective when the complexities and dynamics of recovery processes are properly recognised and are dovetailed into the changing needs of affected individuals, families and groups within the community.
- Evolution of the recovery process with the participation of the community and with use of local resources and expertise is best suited for over all community development.
- Recovery management is most effective when agencies providing services in health, education, social welfare sectors play a major role in all levels of key decision making.
- For holistic recovery, environmental, social and psychological recovery processes should be integrated with infrastructural and economic recovery.

Recovery process is more effective when the plan is comprehensive, executed at the earliest and as per the planned time schedule and the distribution is equitable.

5.11 RECONSTRUCTION & REPAIR WORKS

TABLE 54: RESPONSE DETAILS

Sl. No	Task	Department/ agencies	Activities	Time Period	Cost	Source of Fund
1	Tsunami Rehabilitation Programme (TRP)	Revenue Dept.	<ul style="list-style-type: none"> • 126 Individual Flats Constructed. • 2 Disaster Shelters Constructed. 	5 years	64075812	Govt. of India through Kerala Govt.

CONTROL ROOM AND CHARGE OFFICERS

- Control rooms shall be established at Taluk and District level, and charge/ nodal officers shall be appointed either before/during a calamity season, or when a warning/watch is issued by a competent agency, or in wake of a disaster.
- The control room shall maintain an updated list of emergency contact numbers.
- The control rooms shall operate on a 24X7 basis and duty officers shall be appointed for day time and night time duty.
- The control room duty officer shall make necessary entries in the duty register regarding incoming and outgoing messages and action taken.
- Charge officers for each Taluk shall visit the vulnerable/affected areas and coordinate prevention, preparedness, mitigation, relief and response operations.
- Charge officers shall identify safe shelters that can be used as relief camps in vulnerable areas.
- Charge officers shall take measures to evacuate vulnerable population to safe shelters/ relief camps, if needed. Immediate financial and medical assistance, food, drinkingwater etc shall be provided to the families accommodated in relief camps. Other essential services like water supply, electricity, sanitation facilities, measures to prevent epidemics etc shall be ensured.
- The details of relief camps (location of relief camp, number of families, persons accommodated in each camp, details of medical camps conducted, and other facilities provided) shall be reported daily to the Taluk and district control rooms.
- Charge officers shall ensure proper documentation of damages and arrange for video recording/ taking photographs of damages.
- Charge officers shall ensure that the daily reports on the disaster are communicated to District/ State control rooms.
- Charge officers shall establish local control rooms at disaster site, if necessary

EARLY WARNING SYSTEM (EWS)

In Kannur district the Collectorate, three taluks and ten coastal villages are linked through the VHF based early warning systems. This will be helpful in conveying emergency messages to the coastal communities which are highly prone to coastal disasters.

TABLE 55: LIST OF COASTAL VILLAGES IN KANNUR DISTRICT WHERE EWS WERE INSTALLED

10		Mattool	Village Office

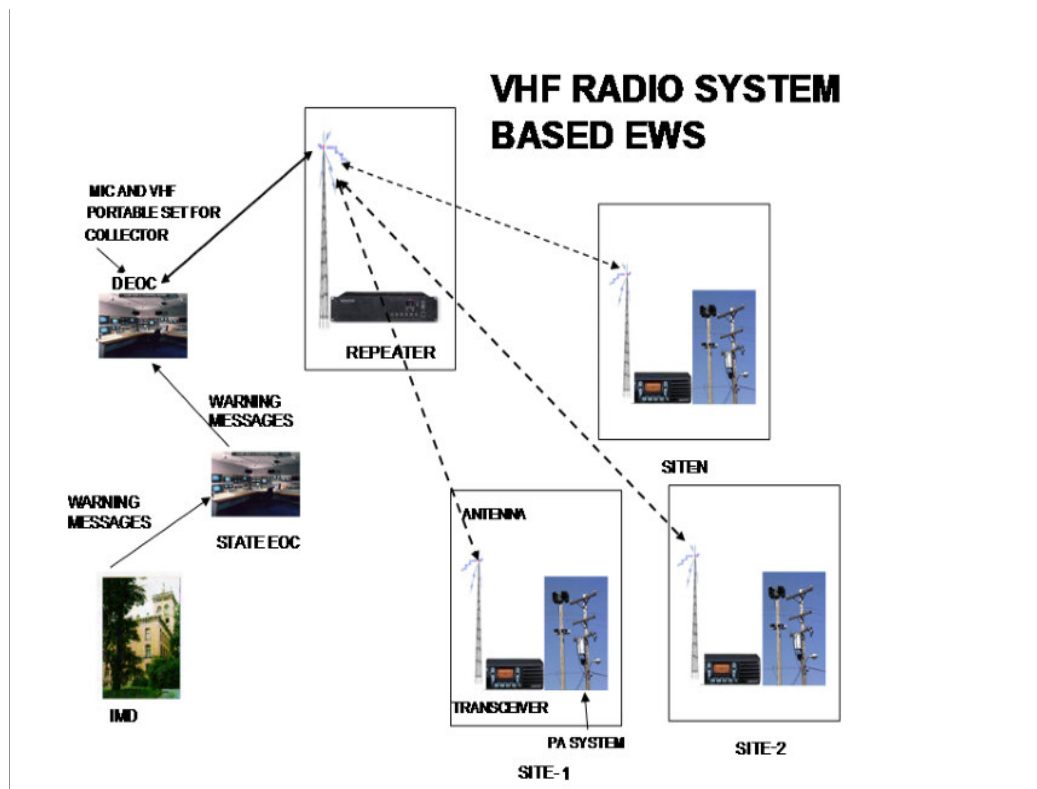

FIGURE 21: VHF BASED EARLY WARNING SYSTEM

EVACUATION

The disaster management plan provides indicative instructions for response since disasters by their very nature are different and often involves a combination of aspects which may not have been considered during the planning process. In case of immediate threat to community, ie, when

the community is exposed to danger within three hours and when evacuation within one kilometre distance is to be effected, only designated persons may order evacuation on the site:

- In consultation with technical personnel (such as in cause of toxic gas container leak)
- In consultation with the local non- official (ex: Panchayat president)
- For appropriate security and law and order, the evacuation should be undertaken with the assistance from community leaders

All such evacuations should be reported to the District Collector and SP within six hours. All other evacuations, ie, threat after three hours or evacuation beyond one kilometre, can be ordered only by the District collector or the competent authority designated.

The following factors shall be considered for evacuation

- Evacuation routes should be away from landslide or flood prone areas.
- In case of inadequate transport or limited time, encourage community for emergency evacuation, evacuating seriously injured and sick, children, women and handicapped, old and disabled persons first.
- In case of affected persons, evacuation must be carried out in the shortest possible time
- The affected persons must be shifted to relief camps and with in the shortest time possible they must be provided water, medicines, first aid and cooked food. Water supplied must be in accordance with acceptable standards of potable water.
- Emergency transport and medical care should be arranged for seriously injured persons.

INCIDENT COMMAND SYSTEM (ICS)

The District Collector is the official Incident Commander to activate the command system and to control and coordinate the resources required at the site of disaster. The ICS is a set of Emergency Management tools consisting the combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, with responsibility for the management of resources to effectively accomplish stated objectives pertinent to an incident.

Functions of ICS

- To create and integrate communication flow during emergency period
- To manage incident scene, and report through integrated and coordinated command plan
- To facilitate procedures and protocols according to ESF Departments within in the city / District.

- To put the communication system in place to receive, record, acknowledge incoming and outgoing information of any form during the disaster
- To manage resources as per their availability such as– distribution of relief material with ESF agencies required during emergency etc
- Monitoring functional areas during and post disaster phase

STANDARD OPERATING PROCEDURES (SOP) EMERGENCY SUPPORT FUNCTIONS (ESF)

I. INTRODUCTION:

Emergency Support functions assist and support the National, State and District Administration at the time of emergency for restoring the damaged public services and facilities of the affected area.

The State level Departments and supporting agencies are responsible to respond for recovery and mitigation purposes during a disaster. The ESF (Emergency Support Function) is an organized system of State/District level departments and agencies that are to be worked under a structured pattern for response and recovery according to National Disaster Response Plan (NDRP).

The Standard Operating Procedure (SOPs) explains about the basic concept of operations and responsibilities of leading and supporting agencies that are to be involved in the ESF system. The document also outlines the purpose and scope for each function of operation that is to be followed by the respective ESF agencies when the Incident Commander activates the response plan during emergency period.

II. ESF ORGANIZATIONAL ROLES AND RELATIONSHIPS

The head of each primary department, team leader (TL) and the nodal officer of the supporting agency have a responsibility to be prepared for potential hazards that might impact the district. These responsibilities are the execution of their mission according to the emergency conditions and the safety of the citizens in emergency situations. These departments/agencies have clearly identified their roles and functions under the National Response Plan (NRP). The departments have been grouped into ESFs as per their nature and type of assistance they can provide so when the team leaders of these ESFs are located in the EOC, they would function for the overall state response.

5.12ESF STRUCTURE

FIGURE 22: ESF STRUCTURE

Function	Nodal Agency/ Team Leader	Participating functionaries / agencies
Coordination (Incident – Commander)	District Administration (District Collector)	SP, DFO, ADM, RDO, DMO, Tahshildars, Municipal corporation, NCC and other related agencies.
Communication	Bharat Sanchar Nigam Limited	Existing wireless operators (Police, Fire) Telecom Dept., mobile operators, FM Radio, Signals Regiment –, Ham Radio, satellite communication, Community Radio.
Law and Order	Police Dept.	Civil Defense and Home guards,Coast Guard
Search and Rescue	Fire & Rescue Service (Divisional Fire Officer)	Department of Revenue, Kerala Police, Civil Defence, Directorate of Health Services, Quick Response Team, WDMT, Coast Guard.
Evacuation	Revenue Divisional Office	Kerala Police, Fire Service, Directorate of Health Service, Civil Defence, Air Force, WDMT, Coast Guard.
Relief (Food, Damage Assessment, Donation, Shelter.....)	District Administration	Department of Food and Civil Supplies, NGOs, WDMT, Religious Organizations. Municipal Corporation, Electricity Board, KWA, Health dept, Education dept, PWD, BSNL, Animal Husbandry, Agriculture. NCC, NYKS, Blood Bank, Red Cross, NSS, Rotary Club, Lions Club, IMA, Y’s Men, Corporate Bodies, Qualified Medical Practitioners Association, Nurses Association, Kerala, VyapariVyvasayiEkopanaSamidhi.
Emergency Medical Response and Trauma Counseling	Department of Health (DMO)	Dispensaries, Mobile Dispensaries, Hospitals, Ambulance Service, Blood Bank, NSS, Rotary Club, Lions Club, IMA. Private medical association, Medicine Stockiest. Indian Red Cross, Civil Defence, Fire Service, WDMTs, NGOs, CBOs.
Public Works Equipment support, debris and road clearance.	PWD	Municipal Corporations, Water Authority, KSEB, PWD, Builders Association, Railway, Fire force.
Relief -Shelter	Revenue Department (ADM/RDO)	Municipality, KWA, Local Civil Suppliers. PWD, Developmental Authorities, NGO representatives.
Cattle Resource Recovery and Care	Animal Husbandry (District Animal Husbandry Officer)	Animal medicine stockiest, Poultry Corporation NGOs, CBOs and religious organizations.

DISTRICT DISASTER MANAGEMENT PLAN – KANNUR 2015

Logistics (Electricity-Water)	Electricity – KSEB Water - KWA	DC Office, Electricity Board, Transport Department, KWA, Corporation, Private Road Ways, PWD, National Highway, Fire Force Dept, Police services, WDMTs, NGOs
Transport	Motor Vehicle (RTO)	KSRTC, Railway, PWD, Kerala Police, Municipality, Private Bus Owners, Scout, NCC etc.
Public Information and Help lines - Warning Dissemination	Public Relations Department	Media (print/audio-visual), NSS, NYK, Scouts & Guides, Education Dept., Department of Information and Publicity, BSNL, AIR etc

The Emergency Support Functions (ESF) and Quick Response Teams will be formed at City level and the Ward Disaster Management (WDMT) will be formed at Ward level. The QRTs at headquarters will leave for site only if the disaster is not manageable at local level.

Roles and responsibilities of primary and secondary Emergency Support Agencies along with Form/Proforma are attached in Annexure 37.

ANNEXURE 36

DETAILED HAZARD SPECIFIC CRISIS MANAGEMENT PLAN

1. EARTHQUAKES

Before an Earthquake

- Repair deep plaster cracks in ceilings and foundations. Get expert advice if there are signs of structural defects.
- Anchor overhead lighting fixtures to the ceiling.
- Follow BIS codes relevant to your area for building standards
- Fasten shelves securely to walls.
- Place large or heavy objects on lower shelves.
- Store breakable items such as bottled foods, glass, and weed killers, pesticides, and flammable products in low, closed cabinets with latches.
- Hang heavy items such as pictures and mirrors away from beds, settees, and anywhere people sit.
- Brace overhead light and fan fixtures.
- Repair defective electrical wiring and leaky gas connections. These are potential fire risks.
- Secure a water heater, LPG cylinder etc., by strapping it to the wall studs and bolting it to the floor. .
- Identify safe places indoors and outdoors.
 1. Under strong dining table, bed
 2. Against an inside wall
 3. Away from where glass could shatter around windows, mirrors, pictures, or where heavy bookcases or other heavy furniture could fall over.
 4. In the open, away from buildings, trees, telephone and electrical lines, fly overs, bridges
- Educate yourself and family members
- Know emergency telephone numbers (doctor, hospital, police, etc)

- **Have a disaster emergency kit ready**
 1. Battery operated torch
 2. Extra batteries
 3. Battery operated radio
 4. First aid kit and manual
 5. Emergency food (dry items) and water (packed and sealed)
 6. Candles and matches in a waterproof container
 7. Knife
 8. Chlorine tablets or powdered water purifiers
 9. Can opener.
 10. Essential medicines
 11. Cash and credit cards
 12. Thick ropes and cords
 13. Sturdy shoes
- **Develop an emergency communication plan**
 1. In case family members are separated from one another during an earthquake (a real possibility during the day when adults are at work and children are at school) develop a plan for reuniting after the disaster.
 2. Ask an out-of-state relative or friend to serve as the 'family contact' after a disaster; it's often easier to call long distance. Make sure everyone in the family knows the name, address, and phone number of the contact person.
- **Help your community get ready**
 - Publish a special section in your local newspaper with emergency information on earthquakes. Localize the information by printing the phone numbers of local emergency services offices and hospitals.
 - Conduct a week-long series on locating hazards in the home.
 - Work with local emergency services and officials to prepare special reports for people with mobility impairments on what to do during an earthquake.
 - Provide tips on conducting earthquake drills in the home.
 - Interview representatives of the gas, electric, and water companies about shutting off utilities.

During an Earthquake

Stay as safe as possible during an earthquake. Be aware that some earthquakes are actually foreshocks and a larger earthquake might occur. Minimize your movements to a few steps to a nearby safe place and stay indoors until the shaking has stopped and you are sure exiting is safe.

If indoors

- **DROP** to the ground; take **COVER** by getting under a sturdy table or other piece of furniture; and **HOLD ON** until the shaking stops. If there isn't a table or desk near you, cover your face and head with your arms and crouch in an inside corner of the building.
- Protect yourself by staying under the lintel of an inner door, in the corner of a room, under a table or even under a bed.
- Stay away from glass, windows, outside doors and walls, and anything that could fall, such as lighting fixtures or furniture.
- Stay in bed if you are there when the earthquake strikes. Hold on and protect your head with a pillow, unless you are under a heavy light fixture that could fall. In that case, move to the nearest safe place.
- Use a doorway for shelter only if it is in close proximity to you and if you know it is a strongly supported, load bearing doorway.
- Stay inside until the shaking stops and it is safe to go outside. Research has shown that most injuries occur when people inside buildings attempt to move to a different location inside the building or try to leave.
- Be aware that the electricity may go out or the sprinkler systems or fire alarms may turn on.
- **DO NOT** use the elevators.

If outdoors

- Stay there
- Move away from buildings, trees, streetlights, and utility wires
- Once in the open, stay there until the shaking stops. The greatest danger exists directly outside buildings, at exits, and alongside exterior walls. Most earthquake-related casualties result from collapsing walls, flying glass, and falling objects.

If in a moving vehicle

- Stop as quickly as safety permits and stay in the vehicle. Avoid stopping near or under buildings, trees, overpasses, and utility wires.
- Proceed cautiously once the earthquake has stopped. Avoid roads, bridges, or ramps that might have been damaged by the earthquake

If trapped under debris

- Do not light a match.
- Do not move about or kick up dust.
- Cover your mouth with a handkerchief or clothing.
- Tap on a pipe or wall so rescuers can locate you. Use a whistle if one is available. Shout only as a last resort. Shouting can cause you to inhale dangerous amounts of dust.

After an Earthquake

- Keep calm, switch on the radio/TV and obey any instructions you hear on it.
- Keep away from beaches and low banks of rivers. Huge waves may sweep in.
- Expect aftershocks. Be prepared.
- Turn off the water, gas and electricity.
- Do not smoke and do not light matches or use a cigarette lighter. Do not turn on switches. There may be gas leaks or short-circuits.
- Use a torch.
- If there is a fire, try to put it out. If you cannot, call the fire brigade.
- If people are seriously injured, do not move them unless they are in danger.
- Immediately clean up any inflammable products that may have spilled (alcohol, paint, etc).
- If you know that people have been buried, tell the rescue teams. Do not rush and do not worsen the situation of injured persons or your own situation.
- Avoid places where there are loose electric wires and do not touch any metal object in contact with them.
- Do not drink water from open containers without having examined it and filtered it through a sieve, a filter or an ordinary clean cloth.
- If your home is badly damaged, you will have to leave it. Collect water containers, food, and ordinary and special medicines (for persons with heart complaints, diabetes, etc.)
- Do not re-enter badly damaged buildings and do not go near damaged structures.

• CYCLONES

The actions that need to be taken in the event of a cyclone threat can broadly be divided into four classes, viz., (i) immediately before the cyclone season; (ii) when cyclone alerts and warnings are on; (iii) when evacuations are advised; and (iv) when the cyclone has crossed the coast.

Before the cyclone season

- Check the house; secure loose tiles, carry out repair works for doors and windows
- Remove dead woods or dying trees close to the house; anchor removable objects like lumber piles, loose tin sheds, loose bricks, garbage cans, sign-boards etc. which can fly in strong winds
- Keep some wooden boards ready so that glass windows can be boarded if needed
- Keep a hurricane lantern filled with kerosene, battery operated torches and enough dry cells
- Demolish condemned buildings
- Keep some extra batteries for transistors
- Keep some dry non-perishable food always ready for emergency use

When the cyclone starts

- Listen to the radio (All India Radio stations give weather warnings).
- Keep monitoring the warnings. This will help you to prepare for a cyclone emergency.
- Pass on the information to others.
- Ignore rumors and do not spread them; this will help to avoid panic situations.
- Believe in the official information
- When a cyclone alert is on for your area continue normal working but stay alert to the radio warnings.
- Remember that a cyclone alert means that the danger is within 24 hours. Stay alert.
- When your area is under cyclone warning get away from low-lying beaches or other low-lying areas close to the coast
- Leave early before your way to high ground or shelter gets flooded
- Do not delay and run the risk of being marooned.
- If your house is securely built on high ground take shelter in the safer part of the house. However, if asked to evacuate do not hesitate to leave the place.
- Board up glass windows or put storm shutters in place.
- Provide strong suitable support for outside doors.
- If you do not have wooden boards handy, paste paper strips on glasses to prevent splinters. However, this may not avoid breaking windows.
- Get extra food, which can be eaten without cooking. Store extra drinking water in suitably covered vessels.
- If you are to evacuate the house move your valuable articles to upper floors to minimize flood damage.

- Have hurricane lantern, torches or other emergency lights in working conditions and keep them handy.
- Small and loose things, which can fly in strong winds, should be stored safely in a room.
- Be sure that a window and door can be opened only on the side opposite to the one facing the wind.
- Make provision for children and adults requiring special diets.
- If the centre of the cyclone is passing directly over your house there will be a lull in the wind and rain lasting for half an hour or so. During this time do not go out; because immediately after that very strong winds will blow from the opposite direction.
- Switch off electrical mains in your house.
- Remain calm.

When evacuation is instructed

- Pack essentials for yourself and your family to last you a few days, including medicines, special foods for babies and children or elders.
- Head for the proper shelter or evacuation points indicated for your area.
- Do not worry about your property
- At the shelter follow instructions of the person in charge.
- Remain in the shelter until you have been informed to leave.

Post Cyclone measures

- You should remain in the shelter until informed that you can return to your home.
- You must get inoculated against diseases immediately.
- Strictly avoid any loose and dangling wires from the lamp posts.
- If you are to drive, drive carefully.
- Clear debris from your premises immediately.
- Report the correct loss to appropriate authorities.

- **TSUNAMI**

Before and During a Tsunami

- Turn on your radio to learn if there is a tsunami warning, if an earthquake occurs and you are in a coastal area.
- Be alert for Early Warnings
- Learn to understand and notice the sea. If there is noticeable recession in water away from the shoreline become cautious and move away immediately.
- Move inland to higher ground immediately and stay there.
- Stay away from the beach.
- Never go down to the beach to watch a tsunami come in. If you can see the wave you are too close to escape it.

After a Tsunami

- Stay away from flooded and damaged areas until officials say it is safe to return.
- Stay away from debris in the water; it may pose a safety hazard to boats and people.
- Save yourself - not your possessions

• LANDSLIDE OR DEBRIS FLOW

Before Landslides

- Do not build near steep slopes, close to mountain edges, near drainage ways, or natural erosion valleys.
- Get a geologic hazard assessment of your property.
- Landslides occur where they have before, and in identifiable hazard locations.

Minimize home hazards:

- Have flexible pipe fittings installed to avoid gas or water leaks, as flexible fittings are more resistant to breakage (only the Gas Company or professionals should install gas fittings).
- Plant ground cover on slopes and build retaining walls.
- In mudflow areas, build channels or deflection walls to direct the flow around buildings.
- Remember: If you build walls to divert debris flow and the flow lands on a neighbor's property, you may be liable for damages.

Recognize Landslide Warning Signs

- Changes occur in your landscape such as patterns of storm-water drainage on slopes (especially the places where runoff water converges) land movement, small slides, flows, or progressively leaning trees.
- Doors or windows stick or jam for the first time.
- New cracks appear in plaster, tile, brick, or foundations.
- Outside walls, walks, or stairs begin pulling away from the building.
- Slowly developing, widening cracks appear on the ground or on paved areas such as streets or driveways.
- Underground utility lines break.
- Bulging ground appears at the base of a slope.
- Water breaks through the ground surface in new locations.
- Fences, retaining walls, utility poles, or trees tilt or move.
- A faint rumbling sound that increases in volume is noticeable as the landslide nears.
- The ground slopes downward in one direction and may begin shifting in that direction under your feet.
- Unusual sounds, such as trees cracking or boulders knocking together, might indicate moving debris.
- Collapsed pavement, mud, fallen rocks, and other indications of possible debris flow can be seen when driving (embankments along roadsides are particularly susceptible to landslides)

During a Landslide or Debris Flow

- **Stay alert and awake.** Many debris-flow fatalities occur when people are sleeping. Listen to Radio or portable, battery-powered radio or television for warnings of intense rainfall. Be aware that intense, short bursts of rain may be particularly dangerous, especially after longer periods of heavy rainfall and damp weather.
- **If you are in areas susceptible to landslides and debris flows, consider leaving if it is safe to do so.** Remember that driving during an intense storm can be hazardous. If you

remain at home, move to a second story if possible. Staying out of the path of a landslide or debris flow saves lives.

- **Listen for any unusual sounds that might indicate moving debris, such as trees cracking or boulders knocking together.** A trickle of flowing or falling mud or debris may precede larger landslides. Moving debris can flow quickly and sometimes without warning.
- **If you are near a stream or channel, be alert for any sudden increase or decrease in water flow and for a change from clear to muddy water.** Such changes may indicate landslide activity upstream, so be prepared to move quickly. Don't delay! Save yourself, not your belongings.
- **Be especially alert when driving.** Embankments along roadsides are particularly susceptible to landslides. Watch the road for collapsed pavement, mud, fallen rocks, and other indications of possible debris flows.

Imminent Landslide Danger

- **Contact your local fire, police, or public works department.** Local officials are the best persons able to assess potential danger.
- **Inform affected neighbors.** Your neighbors may not be aware of potential hazards. Advising them of a potential threat may help save lives. Help neighbors who may need assistance to evacuate.
- **Evacuate.** Getting out of the path of a landslide or debris flow is your best protection.
- **Curl into a tight ball and protect your head if escape is not possible**

After a Landslide or Debris Flow

- **Stay away from the slide area.** There may be danger of additional slides.
- **Listen to local radio or television stations for the latest emergency information.**
- **Watch for flooding, which may occur after a landslide or debris flow.** Floods sometimes follow landslides and debris flows because they may both be started by the same event.
- **Check for injured and trapped persons near the slide, without entering the direct slide area. Direct rescuers to their locations.**
- **Help a neighbor who may require special assistance - infants, elderly people, and people with disabilities.** Elderly people and people with disabilities may require additional assistance. People who care for them or who have large families may need additional assistance in emergency situations.
- **Look for and report broken utility lines and damaged roadways and railways to appropriate authorities.** Reporting potential hazards will get the utilities turned off as quickly as possible, preventing further hazard and injury.

- **Check the building foundation, chimney, and surrounding land for damage.** Damage to foundations, chimneys, or surrounding land may help you assess the safety of the area.
- **Replant damaged ground as soon as possible since erosion caused by loss of ground cover can lead to flash flooding and additional landslides in the near future.**
- **Seek advice from a geotechnical expert for evaluating landslide hazards or designing corrective techniques to reduce landslide risk.** A professional will be able to advise you of the best ways to prevent or reduce landslide risk, without creating further hazard

- **FLOOD**

Before a Flood

- Avoid building in a flood prone area unless you elevate and reinforce your home.
- Elevate the furnace, water heater, and electric panel if susceptible to flooding.
- Install "check valves" in sewer traps to prevent floodwater from backing up into the drains of your home.
- Contact community officials to find out if they are planning to construct barriers (levees, beams, floodwalls) to stop floodwater from entering the homes in your area.
- Seal the walls in your basement with waterproofing compounds to avoid seepage

During a Flood

- Listen to the radio or television for information.
- Be aware that flash flooding can occur. If there is any possibility of a flash flood, move immediately to higher ground. Do not wait for instructions to move.
- Be aware of streams, drainage channels, canyons, and other areas known to flood suddenly. Flash floods can occur in these areas with or without such typical warnings as rain clouds or heavy rain.

If you must prepare to evacuate, you should do the following:

- Secure your home. If you have time, bring in outdoor furniture. Move essential items to an upper floor.
- Turn off utilities at the main switches or valves if instructed to do so. Disconnect electrical appliances. Do not touch electrical equipment if you are wet or standing in water.

If you have to leave your home, remember these evacuation tips:

- Do not walk through moving water. Six inches of moving water can make you fall. If you have to walk in water, walk where the water is not moving. Use a stick to check the firmness of the ground in front of you.
- Do not drive into flooded areas. If floodwaters rise around your car, abandon the car and move to higher ground if you can do so safely. You and the vehicle can be quickly swept away.

Driving Flood Facts

The following are important points to remember when driving in flood conditions:

- Six inches of water will reach the bottom of most passenger cars causing loss of control and possible stalling.
- A foot of water will float many vehicles.
- Two feet of rushing water can carry away most vehicles including sport utility vehicles (SUV's) and pick-ups.

After a Flood

The following are guidelines for the period following a flood:

- Listen for news reports to learn whether the community's water supply is safe to drink.
- Avoid floodwaters; water may be contaminated by oil, gasoline, or raw sewage. Water may also be electrically charged from underground or downed power lines.
- Avoid moving water.
- Be aware of areas where floodwaters have receded. Roads may have weakened and could collapse under the weight of a car.
- Stay away from downed power lines, and report them to the power company.
- Return home only when authorities indicate it is safe.
- Stay out of any building if it is surrounded by floodwaters.
- Use extreme caution when entering buildings; there may be hidden damage, particularly in foundations.
- Service damaged septic tanks, cesspools, pits, and leaching systems as soon as possible. Damaged sewage systems are serious health hazards.
- Clean and disinfect everything that got wet. Mud left from floodwater can contain sewage and chemicals.

- **FIRE**

Before a Fire

The following are things you can do to protect yourself, your family, and your property in the event of a fire:

Smoke Alarms

- Install smoke alarms. Properly working smoke alarms decrease your chances of dying in a fire by half.
- Place smoke alarms on every level of your residence. Place them outside bedrooms on the ceiling or high on the wall (4 to 12 inches from ceiling), at the top of open stairways, or at the bottom of enclosed stairs and near (but not in) the kitchen.
- Test and clean smoke alarms once a month and replace batteries at least once a year. Replace smoke alarms once every 10 years.

Escaping the Fire

- Review escape routes with your family. Practice escaping from each room.
- Make sure windows are not nailed or painted shut. Make sure security gratings on windows have a fire safety opening feature so they can be easily opened from the inside.
- Consider escape ladders if your residence has more than one level, and ensure that burglar bars and other antitheft mechanisms that block outside window entry are easily opened from the inside.
- Teach family members to stay low to the floor (where the air is safer in a fire) when escaping from a fire.
- Clean out storage areas. Do not let trash, such as old newspapers and magazines to accumulate.

Flammable Items

- Never use gasoline, benzene, naphtha, or similar flammable liquids indoors.
- Store flammable liquids in approved containers in well-ventilated storage areas.
- Never smoke near flammable liquids.
- Discard all rags or materials that have been soaked in flammable liquids after you have used them. Safely discard them outdoors in a metal container.
- Insulate chimneys and place spark arresters on top. The chimney should be at least three feet higher than the roof. Remove branches hanging above and around the chimney.

Heating Sources

- Be careful when using alternative heating sources.
- Check with your local fire department on the legality of using kerosene heaters in your community. Be sure to fill kerosene heaters outside, and be sure they have cooled.
- Place heaters at least three feet away from flammable materials. Make sure the floor and nearby walls are properly insulated.
- Use only the type of fuel designated for your unit and follow manufacturer's instructions.
- Store ashes in a metal container outside and away from your residence.
- Keep open flames away from walls, furniture, drapery, and flammable items.
- Keep a screen in front of the fireplace.
- Have heating units inspected and cleaned annually by a certified specialist.

Matches and Smoking

- Keep matches and lighters up high, away from children, and, if possible, in a locked cabinet.
- Never smoke in bed or when drowsy or medicated. Provide smokers with deep, sturdy ashtrays. Douse cigarette and cigar butts with water before disposal.

Electrical Wiring

- Have the electrical wiring in your residence checked by an electrician.
- Inspect extension cords for frayed or exposed wires or loose plugs.
- Make sure outlets have cover plates and no exposed wiring.
- Make sure wiring does not run under rugs, over nails, or across high-traffic areas.
- Do not overload extension cords or outlets. If you need to plug in two or three appliances, get a UL-approved unit with built-in circuit breakers to prevent sparks and short circuits.
- Make sure insulation does not touch bare electrical wiring.

Other

- Sleep with your door closed.
- Install A-B-C-type fire extinguishers in your residence and teach family members how to use them.
- Consider installing an automatic fire sprinkler system in your residence.
- Ask your local fire department to inspect your residence for fire safety and prevention.

During a Fire

If your clothes catch on fire, you should:

- Stop, drop, and roll - until the fire is extinguished. Running only makes the fire burn faster.

To escape a fire, you should:

- Check closed doors for heat before you open them. If you are escaping through a closed door, use the back of your hand to feel the top of the door, the doorknob, and the crack between the door and door frame before you open it. Never use the palm of your hand or fingers to test for heat - burning those areas could impair your ability to escape a fire (i.e., ladders and crawling).

Hot Door	Cool Door
Do not open. Escape through a window. If you cannot escape, hang a white or light-colored sheet outside the window, alerting fire fighters to your presence.	Open slowly and ensure fire and/or smoke is not blocking your escape route. If your escape route is blocked, shut the door immediately and use an alternate escape route, such as a window. If clear, leave immediately through the door and close it behind you. Be prepared to crawl. Smoke and heat rise. The air is clearer and cooler near the floor.

- Crawl low under any smoke to your exit - heavy smoke and poisonous gases collect first along the ceiling.
- Close doors behind you as you escape to delay the spread of the fire.
- Stay out once you are safely out. Do not reenter

After a Fire

The following are guidelines for different circumstances in the period following a fire:

- **If you are with burn victims, or are a burn victim yourself**, cool and cover burns to reduce chance of further injury or infection.
- **If you detect heat or smoke** when entering a damaged building, evacuate immediately.
- **If you are a tenant**, contact the landlord.

- **If you have a safe or strong box**, do not try to open it. It can hold intense heat for several hours. If the door is opened before the box has cooled, the contents could burst into flames.
- **If you must leave your home** because a building inspector says the building is unsafe, ask someone you trust to watch the property during your absence

HAZARDOUS MATERIALS

Before a Hazardous Materials Incident

You should add the following supplies to your disaster kit:

- Plastic sheeting
- Duct tape
- Scissors

During a Hazardous Materials Incident

Listen to local radio or television stations for detailed information and instructions. Follow the instructions carefully. You should stay away from the area to minimize the risk of contamination. Remember that some toxic chemicals are odorless.

If you are:	Then:
Asked to evacuate	Do so immediately. Stay tuned to a radio or television for information on evacuation routes, temporary shelters, and procedures. Follow the routes recommended by the authorities--shortcuts may not be safe. Leave at once. If you have time, minimize contamination in the house by closing all windows, shutting all vents, and turning off attic fans. Take pre-assembled disaster supplies. Remember to help your neighbors who may require special assistance--infants, elderly people and people with disabilities.
Caught Outside	Stay upstream, uphill, and upwind! In general, try to go at least one-half mile (usually 8-10 city blocks) from the danger area. Move away from the accident scene and help keep others away. Do not walk into or touch any spilled liquids, airborne mists, or condensed solid chemical deposits. Try not to inhale gases, fumes and smoke. If possible, cover mouth with a cloth while leaving the area. Stay away from accident victims until the hazardous material has been identified.
In a motor vehicle	Stop and seek shelter in a permanent building. If you must remain in your car, keep car windows and vents closed and shut off the air conditioner and heater.
Requested to stay indoors	Bring pets inside. Close and lock all exterior doors and windows. Close vents, fireplace dampers, and as many interior doors as possible. Turn off air conditioners and ventilation systems. In large buildings, set ventilation systems to 100 percent recirculation so that

	<p>no outside air is drawn into the building. If this is not possible, ventilation systems should be turned off. Go into the pre-selected shelter room. This room should be above ground and have the fewest openings to the outside. Seal gaps under doorways and windows with wet towels or plastic sheeting and duct tape. Seal gaps around window and air conditioning units, bathroom and kitchen exhaust fans, and stove and dryer vents with duct tape and plastic sheeting, wax paper or aluminum wrap. Use material to fill cracks and holes in the room, such as those around pipes. If gas or vapors could have entered the building, take shallow breaths through a cloth or a towel. Avoid eating or drinking any food or water that may be contaminated.</p>
--	--

Shelter Safety for Sealed Rooms

Ten square feet of floor space per person will provide sufficient air to prevent carbon dioxide build-up for up to five hours, assuming a normal breathing rate while resting.

However, local officials are unlikely to recommend the public shelter in a sealed room for more than 2-3 hours because the effectiveness of such sheltering diminishes with time as the contaminated outside air gradually seeps into the shelter. At this point, evacuation from the area is the better protective action to take.

Also you should ventilate the shelter when the emergency has passed to avoid breathing contaminated air still inside the shelter.

After a Hazardous Materials Incident

The following are guidelines for the period following a hazardous materials incident:

- Return home only when authorities say it is safe. Open windows and vents and turn on fans to provide ventilation.
- Act quickly if you have come in to contact with or have been exposed to hazardous chemicals. Do the following:
 - Follow decontamination instructions from local authorities. You may be advised to take a thorough shower, or you may be advised to stay away from water and follow another procedure.
 - Seek medical treatment for unusual symptoms as soon as possible.
 - Place exposed clothing and shoes in tightly sealed containers. Do not allow them to contact other materials. Call local authorities to find out about proper disposal.
 - Advise everyone who comes in to contact with you that you may have been exposed to a toxic substance.
- Find out from local authorities how to clean up your land and property.
- Report any lingering vapors or other hazards to your local emergency services office.

• BIOLOGICAL ATTACK

Before a Biological Attack

What you should do to prepare:

Check with your doctor to ensure all required or suggested immunizations are up to date. Children and older adults are particularly vulnerable to biological agents.

Consider installing a High Efficiency Particulate Air (HEPA) filter in your furnace return duct. These filters remove particles in the 0.3 to 10 micron range and will filter out most biological agents that may enter your house. If you do not have a central heating or cooling system, a stand-alone portable HEPA filter can be used.

Filtration in buildings

During a Biological Attack

In the event of a biological attack, public health officials may not immediately be able to provide information on what you should do. It will take time to determine what the illness is, how it should be treated, and who is in danger. Watch television, listen to radio, or check the Internet for official news and information including signs and symptoms of the disease, areas in danger, if medications or vaccinations are being distributed, and where you should seek medical attention if you become ill.

The first evidence of an attack may be when you notice symptoms of the disease caused by exposure to an agent. Be suspicious of any symptoms you notice, but do not assume that any illness is a result of the attack. Use common sense and practice good hygiene.

If you become aware of an unusual and suspicious substance nearby:

- Move away quickly.
- Wash with soap and water.
- Contact authorities.
- Listen to the media for official instructions.
- Seek medical attention if you become sick.

If you are exposed to a biological agent:

- Remove and bag your clothes and personal items. Follow official instructions for disposal of contaminated items.
- Wash yourself with soap and water and put on clean clothes.
- Seek medical assistance. You may be advised to stay away from others or even quarantined.

• **CHEMICAL ATTACK**

Before a Chemical Attack

What you should do to prepare for a chemical threat:

- Check your disaster supplies kit to make sure it includes:
 - A roll of duct tape and scissors.
 - Plastic for doors, windows, and vents for the room in which you will shelter in place. To save critical time during an emergency, pre-measure and cut the plastic sheeting for each opening.
- Choose an internal room to shelter, preferably one without windows and on the highest level

During a Chemical Attack

What you should do in a chemical attack:

If you are instructed to remain in your home or office building, you should:

- Close doors and windows and turn off all ventilation, including furnaces, air conditioners, vents, and fans.
- Seek shelter in an internal room and take your disaster supplies kit.
- Seal the room with duct tape and plastic sheeting.
- Listen to your radio for instructions from authorities.

If you are caught in or near a contaminated area, you should:

- Move away immediately in a direction upwind of the source.
- Find shelter as quickly as possible

After a Chemical Attack

Decontamination is needed within minutes of exposure to minimize health consequences. Do not leave the safety of a shelter to go outdoors to help others until authorities announce it is safe to do so.

A person affected by a chemical agent requires immediate medical attention from a professional. If medical help is not immediately available, decontaminate yourself and assist in decontaminating others.

Decontamination guidelines are as follows:

- Use extreme caution when helping others who have been exposed to chemical agents.
- Remove all clothing and other items in contact with the body. Contaminated clothing normally removed over the head should be cut off to avoid contact with the eyes, nose, and mouth. Put contaminated clothing and items into a plastic bag and seal it. Decontaminate hands using soap and water. Remove eyeglasses or contact lenses. Put glasses in a pan of household bleach to decontaminate them and then rinse and dry.
- Flush eyes with water.
- Gently wash face and hair with soap and water before thoroughly rinsing with water.
- Decontaminate other body areas likely to have been contaminated. Blot (do not swab or scrape) with a cloth soaked in soapy water and rinse with clear water.
- Change into uncontaminated clothes. Clothing stored in drawers or closets is likely to be uncontaminated.
- Proceed to a medical facility for screening and professional treatment.

• **NUCLEAR BLAST**

Before a Nuclear Blast

To prepare for a nuclear blast, you should do the following:

- Find out from officials if any public buildings in your community have been designated as fallout shelters. If none have been designated, make your own list of potential shelters near your home, workplace, and school. These places would include basements or the windowless center area of middle floors in high-rise buildings, as well as subways and tunnels.
- If you live in an apartment building or high-rise, talk to the manager about the safest place in the building for sheltering and about providing for building occupants until it is safe to go out.
- During periods of increased threat increase your disaster supplies to be adequate for up to two weeks.

Taking shelter during a nuclear blast is absolutely necessary. There are two kinds of shelters - blast and fallout. The following describes the two kinds of shelters:

- **Blast shelters** are specifically constructed to offer some protection against blast pressure, initial radiation, heat, and fire. But even a blast shelter cannot withstand a direct hit from a nuclear explosion.
- **Fallout shelters** do not need to be specially constructed for protecting against fallout. They can be any protected space, provided that the walls and roof are thick and dense enough to absorb the radiation given off by fallout particles

During a Nuclear Blast

The following are guidelines for what to do in the event of a nuclear explosion.

If an attack warning is issued:

- Take cover as quickly as you can, below ground if possible, and stay there until instructed to do otherwise.
- Listen for official information and follow instructions.

If you are caught outside and unable to get inside immediately:

- Do not look at the flash or fireball - it can blind you.
- Take cover behind anything that might offer protection.
- Lie flat on the ground and cover your head. If the explosion is some distance away, it could take 30 seconds or more for the blast wave to hit.
- Take shelter as soon as you can, even if you are many miles from ground zero where the attack occurred - radioactive fallout can be carried by the winds for hundreds of miles. Remember the three protective factors: Distance, shielding, and time.

After a Nuclear Blast

Decay rates of the radioactive fallout are the same for any size nuclear device. However, the amount of fallout will vary based on the size of the device and its proximity to the ground. Therefore, it might be necessary for those in the areas with highest radiation levels to shelter for up to a month.

The heaviest fallout would be limited to the area at or downwind from the explosion, and 80 percent of the fallout would occur during the first 24 hours.

People in most of the areas that would be affected could be allowed to come out of shelter within a few days and, if necessary, evacuate to unaffected areas.

Remember the following when returning home:

- Keep listening to the radio and television for news about what to do, where to go, and places to avoid.
- Stay away from damaged areas. Stay away from areas marked “radiation hazard” or “HAZMAT.” Remember that radiation cannot be seen, smelled, or otherwise detected by human senses.

• **DROWNING**

Rescue

- Village officer should get in touch with the divers in the area. Appendix
- If the divers are unable to be contacted, get in touch with the coast guard.
- The final rescue would be to get the navy in.

First Aid

- Someone is drowning

1. Get help

Notify a lifeguard, if one is close. If not, ask someone to call the emergency number.

- If you are alone, follow the steps below.

2. Move the Person

- Take the person out of the water.

3. Check for breathing

- Place your ear next to the person's mouth and nose. Do you feel air on your cheek?
- Look to see if the person's chest is moving.

4. If the person is not breathing, Check Pulse

- Check the person's pulse for 10 seconds.

5. If there is no Pulse, Start CPR

Carefully place person on back.

- For an adult or child, place the heel of one hand on the center of the chest at the nipple line. You can also push with one hand on top of the other. For an infant, place two fingers on the breastbone.
- For an adult or child, press down about 2 inches. Make sure not to press on ribs. For an infant, press down about 1 and 1/2 inches. Make sure not to press on the end of the breastbone.
- Do 30 chest compressions, at the rate of 100 per minute or more. Let the chest rise completely between pushes.
- Check to see if the person has started breathing.

Note that these instructions are not meant to replace CPR training. Classes are available through the American Red Cross, local hospitals, and other organizations.

6. Repeat if Person Is Still Not Breathing

- If you've been trained in CPR, you can now open the airway by tilting the head back and lifting the chin.
- Pinch the nose of the victim closed. Take a normal breath, cover the victim's mouth with yours to create an airtight seal, and then give 2 one-second breaths as you watch for the chest to rise.
- Give 2 breaths followed by 30 chest compressions.
- Continue this cycle of 30 compressions and 2 breaths until the person starts breathing or emergency help arrives.

• LIGHTNING

- When a thunderstorm threatens, get inside a home or large building, or inside an all-metal (not convertible) vehicle
- Inside a home, avoid using the telephone, except for emergencies
- If outside, with no time to reach a safe building or an automobile, follow these rules
- Do not stand underneath a natural lightning rod such as a tall, isolated tree
- Avoid projecting above the surrounding landscape as you would do if you were standing on a hilltop, in an open field, on the beach, or fishing from a small boat
- Get out of and away from open water
- Get away from tractors and other metal farm equipment
- Get off of and away from motorcycles, scooters, golf carts and bicycles. Put down golf clubs.
- Stay away from wire fences, clotheslines, metal pipes, rails and other metallic paths which could carry lightning to you from some distance away.
- Avoid standing in small isolated sheds or other small structures in open areas.
- In a forest, seek shelter in a low area under a thick growth of small trees. In open areas, go to a low place such as a ravine or a valley. Be alert for flash floods.
- If you're hopelessly isolated in a level field and you feel your hair stand on end - indicating that lightning is about to strike - drop to your knees and bend forward putting your hands on your knees. Do not lie flat on the ground.

Rescue

- People struck by lightning may suffer cardiac arrest, so immediate and aggressive resuscitation greatly improves survival.
- If you are at risk from ongoing lightning, wait until danger has passed or move to a safer place if possible.
- It is safe to touch the person. The body does not retain an electrical charge.
- If the person is not conscious and does not appear to be breathing normally, use an automated external defibrillator (AED), if one is on hand, or:
- For a child, start CPR for children.
- For an adult, start adult CPR
- Do not remove burned clothing unless necessary.
- Lay the victim down with head slightly lower than torso and legs.
- The emergency medical team will assess the person's condition.
- At the hospital, the person will be examined for internal or neurological injuries and burns.

- **SNAKE BITE**
-

- Remain calm.
- Immobilize the bitten arm or leg, and stay as quiet as possible to keep the poison from spreading through your body.
- Remove jewelry before you start to swell.
- Position yourself, if possible, so that the bite is at or below the level of your heart.
- Cleanse the wound, but don't flush it with water, and cover it with a clean, dry dressing.
- Apply a splint to reduce movement of the affected area, but keep it loose enough so as not to restrict blood flow.
- Don't use a tourniquet or apply ice.
- Don't cut the wound or attempt to remove the venom.
- Don't drink caffeine or alcohol.
- Don't try to capture the snake, but try to remember its color and shape so you can describe it, which will help in your treatment.

In Kannur the centres are pappinissery visha chikitsa kendram (ph no-0497 2786555) , and pariyaram medical college .

- **GAS TANKER EXPLOSION (Chala tanker explosion)**

- Evacuate as many people as possible from the vicinity.
- Call fire force and ambulance immediately.
- Village officer once he gets information should inform the Incident commander, The District Collector. Disaster Management Emergency support functions should be set to roll.
- Fire fighting equipments, Electricity Board officials, The Police should all be informed and present on the site.
- Cordon off the area.
- Prevent panic by efficient information dissemination by loudspeakers.
- Try to recycle the water used by a pit and motor since large quantities of water might be required.
- Make sure the safety of the disaster mitigation volunteers by gas masks, fire safe equipments etc.
- Compensation and strict enforcement of the safety rules whenever transportation of gas takes place

- **PESTICIDE CONTAMINATION IN RIVER (thalipparambu rairavan puzha)**

- As soon as any information is obtained stop any use of water from the river.
- Attend to any medical emergency.
- Send the water for chemical Analysis.
- Once the ingredient is assessed, any agent that can neutralize the effect can be used as per chemical expert's advice.
- Check whether the pesticide is in bottles.
- Then a search dive team can be assigned to clean up the river
- Disseminate information to the public at large by media, loudspeakers etc. not to use the water
- Only once after treatment the water becomes potable, can it be used for any purpose.
- Impose immediate penal action for the causative agency.

Standard Operating Procedures for the Hazards mentioned above

- Village Officers, once they get information regarding a landslide, contact the control room.
- Immediately call the specific resource(JCB for earthquake ,cyclone ,landslide ;boat owners ,diving experts ,coast guard and then navy in that order for drowning ,floods),the village wise Phone numbers are given in appendix 7 and get ready for the rescue operation.
- Ambulances and emergency medical aid should be called forth
- The control room should activate the Emergency Support Functions.
- The search and Rescue ESF should arrive on site immediately.
- Proper evacuation to the shelters should be done.
- Arrangements for electricity,water and food in the shelters should be in place
- Relief and reconstruction work to be taken up as soon as the disaster is contained.

MEDICAL FIRST RESPONSE DURING VARIOUS EMERGENCIES

• FOREIGN BODY AIRWAY OBSTRUCTION (FBAO)

Let us first understand that the basic requirements for sustaining life in human body of an open Airway, proper Breathing & Adequate Blood Circulation popularly known as the ABC's of life.

Any obstruction caused to the “airway” or windpipe will impede the breathing process. The obstruction may be because of a foreign body, inflamed tissues inside or one's own tongue folding back in certain cases. The most common reason however is food and other small objects getting struck in the upper and lower part of Airway. FBAO can be partial or complete.

For Normal Adults

- In patients who are conscious and having FBAO approach from behind and give abdominal thrusts repeatedly by holding both hands around the body
- For unconscious patients laying down facing upwards , try to ventilate. If unsuccessful, perform 05 abdominal thrusts by pressing in to the abdomen quick upward thrust.
- If any foreign body is dislodged remove it from the mouth by sweeping outwards with a hooking action using the index finger.

For pregnant women and obese men /women

- (Responsive) Approach from behind, encircle the victims chest with your arms and try chest thrust using your fist carefully avoiding the xiphoid process and ends of the rib cage.
- (unresponsive) lay down the patient in supine position. Try to ventilate the patient. If unsuccessful perform chest thrusts taking care of the above precautions. Perform finger sweep as above to take out of the dislodged object.

For infants

- **Verify complete airway obstruction.** Serious breathing difficulty, ineffective, no strong cry.
- **Position the infant.** Straddle the infant face - down over one of your forearms, head lower than the body. Support the Infant's head by holding the jaw with your hand.
- **Deliver 5 back blows.** Use the heel of your hand between the shoulder blades. If foreign object is not expelled, position the infant face up on your arm , head lower than the body.
- **Deliver 5 Chest thrusts.** Position your middle and ring fingers in the middle of the infant's sternum, just below the imaginary line between the infant's nipples. Use quick down ward motion Repeat steps 2- 4 till effective. **For unconscious infants:-** Try to ventilate and perform steps 2-4. Use the tongue-jaw lift to open mouth & use finger sweep using the little finger to remove the dislodged object, if any.

Alert EMS/rush victim to the hospital

2. CARDIO-PULMONARY-RESUSCITATION (CPR)

The human heart beats or pumps blood to circulate oxygen. Respiratory arrest may lead to cardiac arrest. Once cardiac arrest occurs, circulation ceases and vital organs are deprived of oxygen. When respiratory and cardiac arrest occurs together , the patient is considered clinically dead. Within 4 to 6 minutes without circulation, brain damage will begin, and **after 8 to 10 minutes, the damage is irreversible. (Biological death)**

CPR involves a combination of chest compressions and artificial ventilations designed to revive a person and prevent biological death by mechanically keeping a person's heart and lungs working.

CPR is performed only when the heart stops beating – verify the same

Lay the patient on a flat, firm surface.

Get in position by sitting on one side of the chest and start giving compressions very fast. Avoid breaking the xiphoid process which is the lower part of the sternum or chest bone. After 30 rapid compressions lift chin of the patient and give two full breaths through mouth to mouth ventilations. pressure completely after each compression. Release pressure completely after each compression. Repeat the steps until heart beat and breathing is re established;

Remember the compressions must exceed 100 per minute and the depth should be an effective 2 inches. While ventilating look for a clear rise in the chest level and wait for clearance.

In infants CPR can be performed by compressing with two fingers to a depth of 1.5 inches between both nipples. The infant should be placed on your forearm, using your palm to support the head. The ratio of compressions and breath remains the same as above .

Signs of successful CPR

Have someone feel for a pulse during compressions. A pulse should be palpable with every compression.

- The chest should rise and fall with each ventilation.
- The pupils may begin to react normally
- Patients's may begin to react normally
- Patients's skin colour may improve
- Patient may attempt to move and try to swallow

Alert EMS/rush victim to the hospital

3. **FRACTURES & SPLINTING**

A FRACTURE is any break in the continuity of a bone.

Fractures can be

- open or
- closed
- **Closed fracture:-** Here the Overlying skin is intact. Proper splinting helps prevent closed fracture from becoming open fracture.
- **Open fracture.:** The Skin has been broken or torn either from the inside by the injured bone, or from the outside by the object that caused the penetrating wound with associated bone injury. The bone may or may not protrude through the wound. Open fractures are serious because the risk of contamination and risk of infection is greater.
- **SPLINTING** is applying a device to stabilize any painful, swollen or deformed body part
- **Splinting of help**
- To prevent motion of bone fragments or dislocated joints.
- To reduce pain and suffering
- To minimize damage to soft tissues
- to prevent closed fracture from becoming and open fracture
- To Minimize blood loss or shock.

General Rules for splinting

- Before immobilizing extremity, expose and control bleeding
- Remove all clothing & Jewellery from the injury site and below it.
- If limb is severely deformed or distal circulation is compromised (cyanosis distal to fracture site or no distal pulse) align the bone with gentle traction (pulling). If pain or crepitus worsens, discontinue. After follow local protocol.

- Do not attempt to push protruding bone ends back into place. However, when realigning, they may slip back into place. Make a note if this occurs.
- For patient comfort and proper immobilisation, pad voids between the body and the splint since many rigid splints do not conform to body curves.
- If a joint is injured, immobilise it and the bones above and below
- Pad a splint before applying it.

Alert EMS/rush victim to the hospital

4. HEAT STROKE & EXHAUSTION

The exposure to excessive heat can produce serious health conditions. There are three common emergencies brought about by exposure to excessive heat;

Heat cramps Heat exhaustion & Heat stroke

- ***Heat Cramps***

Occurs when the body loses a large quantity of salt through excessive sweating.

Signs and symptoms of heat cramps

Severe muscle cramps, usually in the legs and abdomen, exhaustion, Nausea & Periods of fainting.

Pre-hospital treatment for heat cramps.

1) Move the patient to a cool area, give water to drink. The patient needs the water more than the salt.

- ***Heat Exhaustion***

Heat exhaustion can occur when a person in poor physical condition does more physical activity in a very hot environment, which affects the blood flow.

Signs and symptoms of heat exhaustion

Rapid, shallow breathing Weak pulse * cold, clammy, pale skin and mucous membranes, with a lot of sweating, Weakness, Dizziness, sometimes leading to fainting

Pre-hospital treatment for heat exhaustion

- 1) Move the patient to a cool place to rest
- 2) Remove or loosen clothing as necessary to cool the patient without causing chills.
- 3) Place the patient in a supine position with legs elevated 20 to 30 cm.
- 4) Administer oxygen if needed.
- 5) Give water, but not to an unconscious patient

- ***Heat Stroke***

Heat stroke is a very serious life-threatening condition. The body becomes overheated, and, in many cases, the patient stops sweating. If left untreated, brain cells will begin to die.

Signs and symptoms

- Deep, rapid breathing* Rapid, strong pulse followed by a rapid, weak pulse,* dry, hot skin, sometimes red
- Dilated pupils* , Loss of consciousness, Convulsions or muscular tremors.

Pre-hospital treatment for heat stroke

Use universal precautions, secure the safety, and alert EMS.

- 1) Cool the patient quickly in any way possible. Move the patient far from the source of heat. Remove his or her garments and wraps the patient with wet sheets. Pour cold water on the sheets. This should normalise the patient's core temperature and help prevent brain cells from dying.
- 2) Place cold bags or ice packs below each one on each armpit, behind the knees and around the ankles, and one on each side of the neck.
- 3) Look for a large container or bathtub and submerge the patient in cold water up to the neck. Use ice to cool the water.

Rush victim to the hospital

5. BURNING

Casuses of Burns

- 1) Thermal: heat(fire, vapour and hot objects), and cold (freezing and frozen objects)
- 2) Chemical: includes several caustics such as acids and alkalis
- 3) Electrical : electricity, i.e., house current, lightning.
- 4) Radiation : ultraviolet rays (including sunlight) and radioactive agents.

Types of burns

1. First degree (Superficial skin-epidermis s burned)
2. Second degree (second layer of skin is burned-leads to pain reddening blistering and
3. Third degree bums (skin, muscle, nerves and bones may be burned)

Pre-hospital Treatment For Burns

Use precaution, secure the scene and alert EMS

- 1) Stop the burning. Run cold water over the burns. Flush away chemicals with water for 20 minutes or more
- 2) Remove any smouldering clothing and jewellery. If you meet resistance or see pieces melted into the skin, cut around the area. Do not try to remove them. If your patient's breathing is inadequate, provide ventilation with supplemental oxygen.
- 3) Cover the burns. Use dry sterile dressings or a disposable Sterile burn sheet. Do not use grease or fat, ointment, lotion, antiseptic or ice on the burns. Do not break any blisters. If

a burn involves the eye, be sure to cover both eyes. Fingers with second or third-degree burns require dressing each finger individually.

- 4) Keep the patient warm and treat for shock.

Pre-hospital Treatment for Chemical Burns

- 1) Brush off dry chemicals, before flushing with water
- 2) Rinse the area with water for at least 20 minutes or more.
- 3) Apply a sterile dressing to the affected area.
- 4) Treat for shock.

Pre-hospital Treatment for Chemical Burns to the Eyes

Rinse the eyes immediately with water for at least 20 minutes. Maintain a flow of water on the affected eye from a faucet (low pressure) bottle, glass or other source. Keep the patient's eyelid(s) open.

Pre-hospital Treatment for Electrical Burns

The more serious problems related to electrical burns are respiratory and / or cardiac arrest, damage to the nervous system and injury to internal organs. Prolonged CPR should be performed on electrical injury victims as they can remain viable for a longer period than with other types of injuries.

Care for electrical burns the same as any other type of burn.

Alert EMS/rush victim to the hospital

ANNEXURE 37

EMERGENCY SUPPORT FUNCTIONS

ESF - 1 Communication

Background:

The communication ESF is primarily responsible for restoration of communication facilities. The ESF on Communication should ensure the smooth flow of information that can cater to the outreach in a time-sensitive manner at state level in response efforts.

Situation Assumptions

1. There would be a congestion in the network because of increased calls to control rooms due to panic created in the community.
2. The initial reports on damage may not give a clear picture of the extent of damage to communication network.
3. The affected site may cut off from the state control rooms and the officials on site and find difficulty in communicating to the District EOC.

Nodal agency: Bharat Sanchar Nigam Limited

Supporting agencies: Existing wireless operators (Police, Fire) Telecom Dept., mobile Operators, FM Radio, Signals Regiment – Army, Ham Radio, satellite communication, Community Radio

- Identify a Team Leader from BSNL
- Identify Nodal Officers from Supporting Agencies.

SOPs for Nodal Agency:

- Team leader (TL) of Communication ESF will activate the ESF on receiving the intimation of occurrence of the disaster from the District EOC/ Other source.
- TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
- TL would establish contact with the district EOC for First Information Report
- TL requests for reports from local ESF contact persons (this would be the local office of ESF Nodal Agency) to understand the current situation and action taken
- Based on information given by the supporting agencies, TL decides on the need to launch an assessment mission to estimate the extent of damage to telecom services and network as well as to come up with possible arrangements to establishing reliable and appropriate network.
- TL communicates situation to supporting agencies and also requests to provide details on the status of equipment and infrastructure in the affected area(s).
- TL informs the Incident Commander on the status of telecom services.
- TL works out a plan of action for private telecom companies and convenes a meeting of all ESF members to discuss and finalize the modalities.
- TL issues orders to establish systems and reports to District EOCs on the action taken. New phone numbers and details of contact persons would also be communicated. If required mobile exchanges would be deployed.(need explanation---mobile exchanges)
- TL gets the temporary telephone facilities established for the public. Prior information on this would be announced through media
- HAM radio operators would be informed about the current requirements and coordination mechanisms shared.
- TL monitors the situation and arranges emergency staff required to operate established systems.
- TL sends the Response team at the affected site with the required equipments and other resources.

SOPS For Quick Response Team On Communication

- The QRT (Quick Response Team) members will reach to the nodal office as soon as they will get instructions from the TL.
- Once the QRTs receive any intimation from the nodal officer to reach at the site they would rush to the site.
- At the emergency site QRT members will take stock of the situation from the IC and would also know about their counter parts.
- QRTs would assess the ground situation and would send sectoral report to the District ESF agency. A sectoral report would contain following:
 - An assessment of overall damage, listing specifically:
 - Overhead route damage (in miles/kilometers).
 - Cable damage (in yards/meters).
 - Specific equipment damaged.
 - Establish a temporary communication facility for use by the public
 - Identify requirements of manpower, vehicles and other materials and equipments. Give priority and concentrate on repairs and normalization of communication system at disaster affected areas.
 - Begin restoration by removing and salvaging wires and poles from the roadways with the help of casual laborers.
 - Carry out temporary building repairs to establish a secured storage area for the equipments and salvaged materials.
 - Establish a secure storage area for incoming equipments and salvaged materials.
 - Report all activities to head office

ESF - 2 Law And Order

Background: The ESF on Law and Order maintains the law and protects the property and valuable commodities. It is mainly responsible to control crowd and avoid riots situations.

Situation Assumptions

- There would be panic and people will gather at a place.
- The crowds may go out of control.
- Riots may also take place.

Nodal Agency: Kerala Police

Support Agencies: Civil Defence and Home guards, central paramilitary forces, CISF, CRPF, Defence Service Core.

SOPS For Nodal Agency

- IC will call the TL of Primary Agency and get the ESF activated.
- TL of primary agency will call nodal officers of supporting agencies.
- TL would activate the City Quick Response Team.
- The QRTs will be deployed at the affected site.
- Cordoning of area to restrict movement of onlookers, vehicular and pedestrian traffic should be done.
- Any additional requirements at site to be taken care of.

SOP for quick response team on law and order

- Quick assessment of law and order situation in affected areas
- Support and coordinate with Local Administration
- Prepare updates on the law and order situation every 4-6 hours and brief the authorities
- Controlling situations like rioting and looting, and cordon off sensitive areas
- QRTs will guide property and valuables in affected areas.
- Control and monitor traffic movement.
- QRTs will provide diversion of traffic on alternate routes as and when it is necessary.
- The QRTs will also provide information about traffic flow along various corridors, especially heavy traffic or congested roads.
- QRTs will communicate to police control rooms, details on the field activities including deployment and reinforcement of staff and resources and communicate nature of additional requirements.

ESF - 3 Search and Rescue

Background: Search and Rescue operations are one of the primary activities taken up in a post disaster situation. The promptness in these operations can make a remarkable difference in the amount of loss of life and property.

Situation Assumptions

- Local community task forces will initiate search and rescue at residential level
- Spontaneous volunteers will require coordination

- Access to affected areas will be limited.
- Some sites may be accessible only through air routes only

Nodal Agency: Divisional Fire Office

Support agency: Department of Revenue, Kerala Police, Civil Defence, Directorate of Health Services, Quick Response Team, and Coast Guard.

SOPS for nodal agency

- IC will call the TL of Primary Agency and get the ESF activated.
- TL of primary agency will call nodal officers of supporting agencies.
- TL would activate the City Quick Response Team.
- Quick Assessment of the S& R operations through Aerial surveys
- Assessments of the specific skill sets and the other equipments required.
- Using IDRN network to check and map the availability of resources in and round the disaster site.

SOP For Quick Response Team On Search & Rescue

- Assessment of damage (locations, number of structures damaged, severity of damage)
- The QRTs will be deployed at the affected site.
- Enlisting the types of equipment required for conducting the S&R
- QRTs will report the situation and the progress in response activities to the respective EOCs.

ESF - 4 Evacuations

Background: The ESF on evacuation is primarily responsible for establishing evacuation plans, identification of fastest evacuation routes and alternate routes and coordinating evacuation logistics during field operations.

Situation Assumptions

- Most of the buildings would be damaged and would not remain serviceable.
- Many structures would be damaged and there would be an urgent need to evacuate.

Nodal agency: Revenue Divisional Office

Suggested supporting agencies: Kerala Police, Fire Service, Directorate of Health Service, Civil Defence, and Coast Guard.

SOPs for Nodal Agency:

- Team leader (TL) of Evacuation ESF would activate the ESF on receiving the warning of the disaster from District EOC.
- TL would inform Nodal Officers (NOs) of supporting agencies about the event and ESF activation.
- TL will direct the QRTs to be deployed at the affected site.
- TL will gather information on availability of predefined evacuation routes.
- Where the predefined evacuation routes are not available, the nodal officer would coordinate through District EOC with other ESFs nodal officers and the support agencies about clearing of routes and identifying alternate routes .

SOPS for Quick Response Team On Evacuation

- The QRT members will reach the nodal office as soon as they get instructions to do so from the TL.
- Once the quick response teams receive an order from the nodal officer for reaching the site they would rush to the site.
- On reaching at the site the QRT members will take stock of the situation from the Incident Management Team at the site and their counter parts.
- The Quick Response Teams with the help of local task forces will start evacuating peoples to safe shelters or open areas.
- The QRT members should concentrate more on evacuation in areas that have been worst affected by the disasters.
- Reporting about all the activities to head office

ESF - 5: Relief - (Damage and Needs Assessment, Food and Relief Supply, Donations, Shelter)

Back Ground: In the event of a disaster there would be a need of disbursing relief materials due to massive destruction of life and property taken place. The ESF on Relief should ensure coordination of activities involving with the emergency provisions of temporary shelters, emergency mass feeding and bulk distribution of relief supplies to the disaster victims as also the disaster managers and relief workers.

Situation Assumptions

- Probability of shortage of a critical resources
- Immediate assistance to the community at the time of resource shortage particularly when affected area is larger.

Nodal Agency: District Administration

Support Agencies: Department of Food and Civil Supplies, NGOs, CBOS, WDMT, Religious Organizations. Municipal Corporation, Electricity Board, KWA, Health dept, Education dept, PWD, BSNL, Animal Husbandry, Agriculture. NCC, NYKS, Blood Bank, Red Cross, NSS, Rotary Club, Lions Club, IMA, Y's Men, Corporate Bodies, Qualified Medical Practitioners Association, Nurses Association, Kerala, Vyapari Vyvasayi Ekopana Samidhi

SOPs for nodal agency

2. TL will activate the ESF on receiving the information of the disaster from District EOC.
3. TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
4. TL will coordinate with all state and district level suppliers as identified with under IDRN.
5. TL will coordinate with other ESFs related to transportation, debris and road clearance to ensure quality supply chain management of relief materials.
6. Ensuring composite relief with availability of complimentary relief material.

SOP for Quick Response Team (QRT) on Relief

- QRTs will be responsible to management and distribute relief items to the affected victims
- QRT's will be responsible for reporting the progress on action taken by the team to the EOC.
- QRTs will provide information to their TL about the need of additional resources.
- Assist local authorities to set up important telecom and other service related facilities
- Initiate, direct and market procurement of food available from different inventories and ensuring food supplies to the affected population.
- Preparing take-home food packets for the families.
- Ensuring distribution of relief material to the all the people including vulnerable groups of the target area such as women with infants, pregnant women, children, aged people and handicapped.
- Ensuring support to Local Administration.

ESF - 6 Medical Response and Trauma Counseling

Background: The ESF on Medical Response and Trauma Counseling will look after emergency treatment for the injured people immediate after the disaster take place.

Situation Assumptions

- Emergency Medical services will be required by affected population
- Likely outbreaks of epidemic diseases after the disaster.
- Hospital services would be affected

Nodal Agency: Department of Health (DMO)

Suggested Support Agencies: Dispensaries, Mobile Dispensaries, Hospitals, Ambulance Service, Blood Bank, NSS, Rotary Club, Lions Club, and IMA. Private medical association, Medicine Stockiest. Indian Red Cross, Civil Defense, Fire Service, WDMTs, NGOs, CBOs, Indian Red Cross, Civil Defense, Fire Service, NGOs, CBOs etc

SOPS for nodal agency

- IC will call the TL of Primary Agency and get the ESF activated.
- Team leader (TL) of primary agency will call nodal officers of supporting agencies.
- In coordination with the transportation ESF, it will ensure a critical number of medical professionals to be reached at the site including specialists from other states.
- If temporary housing arrangements are being made for the affected population, the ESF must ensure high standards of sanitation in settlements in order to reduce epidemic outbreak.
- Ensuring the provision and continuous supply of medical facilities (medicines, equipments, ambulances, doctors and manpower etc) required at the disaster affected site and the hospital health centres catering to disaster victims.
- In case of orthopedic care required in disasters like earthquakes the immediate response would have to be complimented by a follow up treatment schedule for a majority of the patients in/ near their place of residence.
- Trained professionals should be mobilized by psychosocial support.
- Ensuring setting up of temporary information centres at hospitals with the help of ESF through help lines and warning dissemination system.
- TL will coordinate, direct, and integrate District/state level response to provide medical and sanitation health assistances.
- On the recommendations of the EOC, the TL also responsible to :
- Send required medicines, vaccines, drugs, plasters, syringes, etc.
- Arrange for additional blood supply. Send additional medical personnel equipped with food, bedding and tents etc.
- Send vehicles and any additional medical equipments.

SOP for Quick Response Team (QRT) on Medical Response and Trauma Counseling

- QRTs will provide situation and progress reports on the action taken by the team to the respective EOCs.
- QRT's will assess type of injuries, number of people affected and possible medical assistance needs.
- QRTs will ensure timely response to the needs of the affected victims such as:
 - Establishing health facility and treatment centers at disaster sites.
 - Providing medical services as reported by the District Civil Surgeon with District Control Room and District EOCs.
- Procedures should be clarified in between
 - Peripheral hospitals
 - Private hospitals
 - Blood banks
 - General hospitals and
 - Health services established at transit camps, relief camps and affected villages.
- QRTs should maintain check posts and surveillance at each railway junction, ST depots and all entry and exit points from the affected area, especially during the threat or existence of an epidemic.

ESF - 7 Public Works Equipment Support, Debris and Road Clearance

Background: The importance of this ESF emanates from the fact that most large scale hazards such as earthquakes, cyclones, floods primarily affect the building structures.

Situation Assumptions

- Access to disaster-affected area would depend upon the re-establishment of ground and water routes.
- Early damage assessment may be incomplete, inaccurate and general. A rapid assessment may be required to determine response time.

Engineers and masons may be required in large scale for the inspection of present buildings

Nodal agency: PWD

Support Agencies: Municipal Corporation, Military Engineering Services, Water Authority, KSEB, PWD, Builders Association, Army, Railway, Fire force.

SOPs for Nodal Agency:

- Team leader (TL) will activate the ESF on receiving the information of the disaster from District EOC.
- TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
- TL will coordinate with the supporting agency to mobilize equipments from the warehouses through IDRN database
- The respective supporting agencies will contact their respective personal to move the equipments to central warehouse
- The equipments like JCB, concrete cutters identified as per the need will be transported to the site.
- As per the information the nodal officer of Debris road clearance will make an assessment on of the damages of roads and built structures at the site and surrounding areas
- The nodal officers of Supporting Agencies will immediately start debris clearance operation to enable movement to the affected site.
- Review of the current situation is taken up by the nodal agency to update the support agencies and to delegate their respective personnel to take precautionary measure to plan de-routes for the transportation ESF's to be operational
- All supporting agencies will inspect the road and rail network and structures within the disaster site and surrounding.
- TL will also ensure proper corpse disposal and post mortem by coordinating with ESF on medical response.

SOP for Quick Response Team on Equipment support, Debris and Road Clearance

- Damage assessment including locations, number of structures damaged and severity of damage
- The QRTs will be deployed at the affected site.
- Enlisting the types of equipment as compiled from IDRN resource inventory required for conducting the debris clearance
- The QRTs will report the situation and the progress in response activities to the respective EOCs.
- Undertake construction of temporary roads to serve as access to temporary transit and relief camps, and medical facilities for disaster victims.
- Repairing of all paved and unpaved road surfaces including edge metalling, pothole patching and any failure of surface, foundations in the affected areas by maintenance engineer's staff and keep monitoring their conditions.

ESF - 8 Shelters (relief)

Back Ground: The purpose of ESF on Shelter is to meet the physical needs of individuals, families and communities for safe secure and comfortable living space. The ESF should also be able to meet primary social needs of incorporating self management in the process.

Situation Assumptions

- Most of the existing structures will be severely damaged.
- The offices of local authorities may also be affected adversely.
- A large number of people may be rendered homeless.

Nodal Agency: Revenue Divisional Office / District Administration

Support Agency: Municipality, KWA, Local Civil Suppliers, PWD, Developmental Authorities, HUDCO, Nirmithikendra, Cost Ford, WDMT, NGO representatives.

SOPs for Nodal agency

- TL will activate the ESF on receiving the information of the disaster from District EOC.
- TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
- TL will coordinate with all city and district level suppliers as identified with under IDRN.
- TL coordinate with other ESFs related to transportation, debris and road clearance to ensure quality supply chain management of relief materials.
- Ensuring composite relief with availability of complimentary relief material.

SOP for Quick Response Team (QRT) on Shelter

- QRTs will report to site of the relief camps.
- QRTs will be responsible to management and distribute relief items to the victims.
- QRT's will be responsible for reporting the progress on action taken by the team to the EOC.
- QRTs will provide information to their TL about the need of additional resources.
- Clearing of the areas to establish relief camps.
- QRTs will carry a quick assessment of damaged areas and areas that can be used for relief camps for displaced population.
- Setting up relief camps and tents using innovative methods that can save time.
- Assist local authorities to set up important telecom and other service related facilities.
- Initiate, direct and market procurement of food available from different inventories and ensuring food supplies to the affected population.

- Ensuring support to Local Administration.
- Locating adequate relief camps based on damage survey

Develop alternative arrangements for population living in structures that might be affected even after the disaster

ESF - 9 Water Supplies

Background

The ESF on drinking water and water supply will ensure provision of basic quantity of clean drinking water and water for other purposes in a manner that does not allow the spread of diseases through the contamination of water.

Situation Assumptions:

- Existing water storage bodies will be damaged and unusable.
- There would be an urgent need of water to assist victims in rescue operation.
- Break down of sanitation system.
- Contamination of water due to outflow from sewers or due to breakage of water pipelines.

Nodal agency: Kerala Water Authority

Support Agency: Municipal Corporations , DC Office, Transport Department, Corporation, Fire Force Dept, Police, WDMTs, NGOs

SOPs for Nodal Agency

- Team leader (TL) of ESF on Water Supply will activate the ESF on receiving the intimation of the disaster from District EOC.
- TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
- TL will ensure special care for women with infants and pregnant women.
- Provide for sending additional support along with food, bedding, tents
- Send vehicles and any additional tools and equipments needed.

SOP for Quick Response Team (QRT) on Water Supply

- QRTs will ensure that supply of drinking water is made available at the affected site and relief camps
- QRT's will ensure the temporary sewerage lines and drainage lines are kept separate.
- QRTs will report the situation and the progress on action taken by the team to the EOC.
- QRTs will intimate their TL of the additional resources needed.

- Carry out emergency repairs of all damages to water supply systems.
- Assist health authorities to identify appropriate sources of potable water.
- Identify unacceptable water sources and take necessary precautions to ensure that no water is accessed from such sources, either by sealing such arrangements or by posting the department guards.
- Arrange for alternate water supply and storage in all transit camps, feeding centres, relief camps, cattle camps, and also the affected areas, till normal water supply is restored.
- Ensure that potable water supply is restored as per the standards and procedures laid down in “Standards for Potable Water”.
- Plan for emergency accommodations for staff from outside the area.
- QRTs will ensure timely response to the needs of the affected victims.
- QRTs will set up temporary sanitation facilities at the relief camps.

ESF - 10 Electricity

Background: The ESF on electricity will facilitate restoration of electricity distribution systems after a disaster. In the event of a disaster there would be major electricity failure and many power stations damaged.

Situation assumptions

- Prolonged electricity failure.
- The affected victims may be panicked
- Halt of all activities specially jamming communication networking systems in the affected site.

Nodal agency: KSEB

Support Agencies: DC Office, Transport Department, Corporation, PWD, National Highway, Fire Force Dept, Police services, WDMTs, NGOs

SOPs for Nodal Agency:

- IC will call the TL of Primary Agency and get the ESF activated.
- TL of primary agency will call nodal officers of supporting agencies.
- TL would activate the State Quick response Team.
- The QRTs will be deployed at the affected site.
- TL will dispatch emergency repair teams equipped with tools, tents and food.

SOP for Quick Response Team on Electricity

- Assisting hospitals in establishing an emergency supply by assembling generators and other emergency equipments, if necessary.
- The members of QRTs will establish temporary electricity supplies for other key public and private water systems.
- The members of QRTs will establish temporary electricity supplies for transit camps, feeding centres, relief camps and SOC, District Control Room and on access roads to the same.
- The members of QRTs will establish temporary electricity supplies for relief material godowns.
- Compile an itemised assessment of damage, from reports made by various electrical receiving centres and sub-centres.
- Report about all the activities to the head office

ESF -11 Transport

Background: The ESF on Transport should ensure smooth transportation links at state and district level. Within the disaster context, quick and safe movement of material and humans are a priority. It should coordinate the use of transportation resources to support the needs of emergency support forces requiring transport capacity to perform their emergency response, recovery and assistance missions.

Situation assumptions

- The District civil transportation infrastructure will sustain damage, limiting access to the disaster area.
- Access will improve as routes are cleared and repaired.
- The movement of relief supplies will create congestion in the transportation services.

Nodal agency: KSRTC

Support Agencies: KSRTC, Railway, PWD, Kerala Police, Municipality, Civil Defence, Civil Aviation, Private Bus Owners, Private Air liaison, Scout, NCC etc.

SOPs for Nodal Agency:

- TL of Transportation ESF will activate the ESF on receiving the intimation of the disaster from District EOC.
- TL would inform Nodal Officers (NOs) of support agencies about the event and ESF activation.
- TL establishes contact with the district EOC for FIR

- TL requests for reports from local Transportation ESF contact person
- TL communicates situation to support agencies and requests for detailed information on the status of transportation infrastructure in the affected area(s).

SOP for Quick Response Team on Transport.

- The QRT members will reach to the nodal office as soon as they will get instructions to do so from the TL.
- As quick response teams will receive instructions from the nodal officer they would reach to the site immediately.
- QRTs would report the situation and the progress on action taken by the team to the respective EOCs
- QRT will send a requirement schedule for the different modes of transportation eg. trucks, boats, helicopters to be put on stand-by.
- QRTs will ensure timely re-establishment of the critical transportation links.
- The members of QRTs will establish temporary electricity supplies for relief material godowns.
- Compile an itemized assessment of damage, from reports made by various electrical receiving centers and sub-centers.
- Reporting about all activities to the head office.

ESF - 12 Help Lines, Warning Dissemination

Background: The ESF on help lines and warning dissemination should process and circulate information about the welfare of citizens of affected area and managing the tremendous flow of information. The help lines will be responsible for providing, directing and coordinating logistical operations.

Situation Assumptions

- There may be a flood of information and confusion about the injured population.
- The communication with affected area may be partially impaired.

State nodal agency: Public Relations Department

Support Agencies: Dooradarsan, UNI, Press Trust of India, Cable net works NGOs, Media (print/audio-visual), NSS, NYK, Scouts & Guides, Education Dept., Department of Information and Publicity, BSNL, AIR etc

SOPs for Nodal Agency:

- IC will call the TL of Primary Agency and get the ESF activated.

- TL of primary agency will call nodal officers of supporting agencies.
- TL would activate the State Quick response Team.
- The QRTs will be deployed at the affected site.
- QRTs will report the situation and the progress in response activities to the respective EOCs.
- Sending flash news of latest updates/donation requirements for disaster area all over the state
- Assisting the EOC in providing updated information to national as well as at the state level.
- Setting up of toll free numbers for emergency information assistance.

SOP for Quick Response Team on Help Lines, Warning Dissemination

- The QRT members will reach to the nodal office as soon as they will get instructions.
- QRT teams would reach to the site immediately after receiving instructions from the nodal officer
- On the site QRT members will take stock of the situation from the IC at the site and their counter parts.
- The QRTs will coordinate, collect, process, report and display essential elements of information and facilitate support for planning efforts in response operations.

1. Duties and responsibilities of various departments/ Officers

The duties and responsibilities of the various departments/ officers outlined below are indicative and every department shall preferably prepare Standard Operating Procedures for inter and intra departmental coordination. General guidelines for all departments are as given below.

Normal Time Activity:

- Assess the preparedness level of the department
- Maintain updated inventories of resources: material, human and institutional, which may be of use during the relief and response phase
- Maintain updated emergency contact details

Activities on receipt of warning or invocation of disaster management plan:

- With in the affected district/ Tahsil, leave sanctioned to the department personnel, as requisitioned by the District Collector will stand cancelled and the personnel will be back on duty.
- Out of station officers and staff will be recalled.
- All personnel working within the district come under the direction and control of the District Collector.
- Fill department vehicles with fuel and park them in a protected area

8.5.1. VILLAGE OFFICERS

- Village officers shall collect and maintain an updated emergency contact directory and inventory of human, material and institutional resources available within and in the vicinity of the village.
- Village officers shall assess and report the damages and losses on a day-to-day basis. They shall assist the officials from other departments like Agriculture Department in conducting Joint Damage Assessments for different sectors.
- The daily reports and first information reports shall be sent in specified formats to the Taluk control rooms.
- In case of a major calamity, village officers shall not leave the headquarters without prior permission of the Tahsildar
- The village officers shall take necessary actions for distributing the relief/ Exgratia etc within 24 hours

8.5.2. HEALTH DEPARTMENT

- Ensure preparedness of health department for mass casualty management, relief operations, trauma care and psychosocial support to disaster victims.
- Stock emergency medical equipment and drugs, which may be required after a disaster, and make arrangements for purchase if needed
- Establish public information centre
- Mobilize medical teams and supplies to provide immediate medical assistance in the vulnerable areas, affected areas and in relief camps
- Take measures for disease surveillance and to prevent epidemic spread in endemic and vulnerable areas as well as relief camps
- Plan for vector control programmes

8.5.3. DISTRICT SUPPLY OFFICER

- Shall make sure the availability of food grain and other supplies in the depot's in vulnerable areas, for providing free ration to affected population if necessary

8.5.4. AGRICULTURE DEPARTMENT

- Provide information to all concerned about the disasters, likely damages to crops and plantations and information about ways to protect the same
- Monitor the drought situation, establish pest and diseases monitoring systems and advise the farmers on mitigation measures
- Assess the direct and indirect loss in the agricultural sector due to disasters and report the village wise details on a weekly basis and estimate needs
- Establish public information center

8.5.5. EDUCATION DEPARTMENT

- Ensure the structural safety of school buildings before the commencement of every academic year.
- Take measures to ensure that all schools improve their disaster preparedness and take up prevention and mitigation measures.
- Direct schools to prepare School Disaster Management Plans and conduct mock drills twice in every academic year.
- In case of a disaster in school or affecting school(s), coordinate with other departments and emergency management officials to ensure quick and efficient emergency response and relief operations.
- Assist the revenue department in identifying schools for operating relief camps in vulnerable/ affected areas and make schools available for the same.

8.5.6 KERALA STATE ELECTRICITY BOARD

- Review and update precautionary measures and procedures and check emergency tool kits
- Immediately undertake inspection from the time of receipt of warning of the high tension lines, towers, substations, transformers, insulators, poles and other equipments
- Conduct damage assessment through reconnaissance surveys and report the same
- Disconnect the main electricity supply to the affected area, if required
- Undertake repair/ reconstruction works
- Establish emergency supply/ temporary electricity supply for key public facilities – hospitals, public water systems, relief camps, control rooms, relief material godown

8.5.7 POLICE DEPARTMENT

- Establish radio/ wireless communication
- Provide guards as needed for supply depots, convoys for relief materials
- Assist in warning dissemination
- Assist evacuation of vulnerable/ affected population
- Assist search and rescue operations
- Maintain law and order
- Traffic management, cordoning off the affected areas/ diverting traffic from affected areas, and patrolling on all access roads to disaster site
- Provide security to transit and relief camps, affected villages, hospitals and medical centers
- Provide security arrangements for the visiting VVIPs and VIPs
- Assist district authorities to take necessary action against hoarders, black marketers and those found manipulating relief materials.
- In conjunction with other government offices, activate public information center
- Make officers available to enquire into and record deaths, as there is not likely to be time nor person available to carry out standard postmortem procedures
- Monitor the needs of military and para-military personnel in the area

8.5.8 IRRIGATION DEPARTMENT

- Identify flood prone rivers and areas in the district and activate flood monitoring mechanisms
- Organize round the clock inspection and repair of irrigation structures and equipments

8.5.9. ANIMAL HUSBANDRY DEPARTMENT

- Stock emergency medical equipments and drugs, which may be required after the disaster
- Take measures for disease surveillance and to prevent spread of cattle epidemics

8.5.10. WATER AUTHORITY

- Continuously monitor the wells, lakes, ponds, intake structures, pumping stations, pumping mains, treatment plant etc to prevent contamination
- Establish procedures for emergency distribution of water if existing supply is disrupted, and in areas affected by saline intrusion, drought or other pollution in the regular water supply
- Arrangements for potable water supply in relief camps

8.5.11. PUBLIC WORKS DEPARTMENT

- Inspect all roads, road bridges including under water inspection of foundation and piers
- Inspect all government buildings and structures, and life line structures
- Assemble emergency tool kits and maintain inventory of resources
- Conduct damage assessments, loss assessments after a disaster

GOVERNMENT OF KERALA

Abstract

Disaster Management Department – District Disaster Management Authority (DDMA) plan of all Districts - Approved – Orders issued.

DISASTER MANAGEMENT (REVENUE-K) DEPARTMENT

G.O(R)/No.3104/2016/DMD
